All countries with 'smart citizens'

Science Coalition, The Netherlands

What Works Movement, UK/USA

Ambitions

- How can we better connect *the people* to politics through evidence?
- How can we use AI responsibly for better policies?
- Can we create “universal policy effectiveness” through RCT’s?
- How to strengthen the role of science?
- How to achieve a learning government and what does this require?
- Can we be open about the nature of evidence?

In short.....

How can we learn from best practises worldwide and get connected?

Societal Impact of Science 2023 / AESIS

Science advice at various levels of governments

Rémi Quirion, OC, PhD, CQ

Quebec Chief Scientist & President of INGSA

June 20st, 2023

A unique model: the broad mandate of Québec's Chief Scientist

Québec Chief Scientist's Mandates

A unique model: the mandate combines an advisory role on science to the government :

- To *advise* the Minister of Economy, Innovation and Energy & Québec's government on any matters pertaining to the development of research & science; links with most Ministers;
- To promote international research partnerships and science diplomacy (missions with the PM & various ministers); science diplomacy including my role as President of the International Network for Governmental Science Advice (INGSA);
- Global scientific collaborations;
- To promote scientific literacy & partnerships with the civil society (e.g. Audace, Engagement and Dialogue programs);

... and CEO of the three research funds (FRQNT, FRQS, FRQSC):

- To support basic research in all fields & to develop intersectoral research linked to major societal challenges (demographic changes and the aging of the population; sustainable development and climate change; creativity and entrepreneurship; and more recently, the 'Science and Society'-focused issues (disinformation, democracy, etc.). Challenges related to the United Nations Sustainable Development Goals (SDGs);
- To promote careers in research (trainees at all levels).

Fonds de Recherche du Québec's (FRQ) vision : To support excellence & creativity in research taking into account SDGs & EDI in an open science model.

**Founding member of the
International
Network for Government
Science Advice (INGSA)
en 2013**

**President since
september 2021**

**Over 5,000 members
from 130 countries.**

Advising the Minister... & Government

Advising the Minister of Economy, Innovation and Energy on the development of research, science and innovation. Collaborations with several other ministries including Premier's office... Since 2011, 4 Prime Ministers from 3 parties; 8 Ministers. RESILIENCE & TRUST

- **Active participation in parliamentary committees (e.g. Access to Administrative Data, Economy & Labour, University of the Future, Climate changes, Covid-19 pandemic...).**
- **Consultation with ministries regarding the strategic plans of the Fonds de recherche du Québec.**
- **Involvement in Québec's international policy; data access and AI-digital strategy; SQRI; innovation districts.**
- **Mandates from Ministers: Report on the future of universities (2020-implementation underway); access to health data with the director of the Office of Innovation; strategy toward the successful mitigation of CO2; Adaptation to Climate changes....**

Science, politics & government

We must encourage our governments and elected officials to take into account research and scientific expertise, whatever the sector, in decision-making. The pandemic as an "accelerator".

- **Scientific expertise is not the only component of political decision-making, but must nevertheless be better considered.**
- **Support for Science and Policy programs and training workshops with policy makers & elected officials.**
- **And of course, the "general public".**

Research, evidence and public policy: sometimes it works, sometimes it doesn't!

Ban live bait fish to control the proliferation of grass carp: the MFFP follows the recommendations of the researchers. Impact on sport fishing and tourism.

Displacement of woodland caribou in the Val-D'Or region: government and university experts recommend a logging road as an alternative route (2016-2017). Proposal rejected!

Scientists in residence: promoting scientific expertise & advice in our government.

The *Forum sciences et politiques du Québec* (Forum SPQ) is a community of practice at the interface between science and public policy in Quebec, bringing together people from public administration, politics, research and innovation. It has over 800 members.

- **Program for scientists in residence in ministries (2-year internships).**
- **Studies concerning the use of scientific information by civil servants.**

Promote scientific diplomacy by setting up internships for scientist in residence in Québec offices abroad: contribute to Québec's positioning at the international level, to the link between the Québec university network and that of the host country.

- **Doctoral students from all research sectors.**
- **Conclusive experience with the first cohort: two doctoral students in pure sciences (!) in London and Munich...**
- **Four scientists in residence in post (South Korea, Japan, Morocco and UNESCO) and preparation of another call for applications (United States, Germany and Belgium).**

Gabrielle Simard (PhD in physics from McGill University) in Munich. Jean-Christian Lemay (PhD in chemistry at Laval University) in London.

And what about our fellow citizens? How to involve them in these processes?

Scientific advice for better public policies: we must involve citizens if we want them to adhere to the decisions of elected officials. At the same time, we must increase scientific literacy, which is the best antidote against the misinformation that threatens our democracies. Some FRQ programs :

- **ENGAGEMENT** program for participatory science : allows a contribution of the population to research, to exploit collective intelligence and to bring citizens closer to science and research.
- **DIALOGUE** program to encourage interaction between science and society (researchers and students).
- **REGARDS ODD** program: digital communication projects by small student teams aimed at young people.
- **AUDACE** program aims to do research differently, increase inter-order, interdisciplinary and inter-sector synergies to meet societal challenges.

CEO of the Fonds de recherche du Québec

CEO of the Fonds de recherche du Québec (FRQ)

Québec Research Funds (FRQ)

- **In their respective fields, the FRQ promote collaborative basic and translational research & the training of the next generation;**
- **They facilitate partnerships at all levels in Québec, Canada (especially with the federal councils) and at the international level.**

80% of our budget aims to support excellence in basic, non-targeted research programs.

For the first time in our history, three exceptional women as Scientific Directors...

Open science, the SDG & EDI: major priorities.

THE SCIENTIFIC DIRECTORS

Janice Bailey
Fonds de recherche du Québec -
Nature et technologies

Carole Jabet
Fonds de recherche du Québec -
Santé

Louise Poissant
Fonds de recherche du Québec -
Société et culture

Québec strategy for research and investment in innovation 2022-2027(SQRI²)

\$7.5 billion over five years, including \$1.2 billion for FRQ (13% increase!)

Five axes to promote the innovation cycle (research-innovation-commercialization) throughout Quebec: 1) Excel in research; 2) Create an environment conducive to innovation; 3) Commercializing the innovation; 4) Develop talents and scientific culture; 5) Focus on sectors of the future.

- Improvement of FRQ basic credits (\$70M over five years).
- Support for the FRQ to meet four major societal challenges.
- Science and Society Challenge: fight against misinformation, science and policy interface in Quebec, etc.

Changements démographiques et vieillissement

Développement durable et changements climatiques

Entrepreneuriat et créativité

Dialogue science et société

Key FRQ Research Programs

In our three most recent strategic plans (2022-2025):

- **UN Sustainable Development Goals (SDG);**
- **Principles of Equity, Diversity and Inclusion (EDI);**
- **Open Science;**
- **Disinformation and Development of critical thinking;**
- **Collaborations between Scientists and government (PDF-Scientists in Residence—2y).**

Publicly-funded research

- **Should benefit society, and sustainable development is a major concern.**
- **Basic research is essential to discover novel means to reach the ambitious goals of the SDG.**
- **The way forward to a better and sustainable future for all.**

From Global to Local Governments: Different Needs & Science Advice should be properly adapted

Scientific expertise, research results and evidence help our elected officials and governments make decisions: from global to local.

Develop initiatives to encourage members of the scientific community to get involved in parliamentary and all levels of governments.

Capacity building on research & science advice internationally with the International Network for Governmental Science Advice (INGSA; co-founder & President since Sept 2021).

International Network
for Governmental
Science Advice

International Network for Governmental Science Advice (INGSA)

International Network for Governmental Science Advice (INGSA)

INGSA is a collaborative platform bringing together various national and international science advisory organizations to facilitate dialogue with policy makers, elected officials & scientists & science advice organizations. Capacity building and research in the science of science advice. Science diplomacy.

Founding member of INGSA in 2013, and president since September 2021. Over 5,000 members in 130 countries! It's free — I invite you all to join.

Mandates

- **Strengthen individual and institutional capacities in science policy interfaces. Simulation workshops all over the world.**
- **Generate and share practice-oriented knowledge. Last INGSA international congress in Montreal and virtually (September 2021).**
- **Convene and strengthen communities of practice in science advice and science diplomacy. Our Chapters as key components.**

My priorities as President of INGSA

Organizational capacity building

The governance and consolidation of the organization, including the strengthening of our human resources and finances. Election of an international board (3 VPs-England, Ethiopia, Chile). Strategic plan 2022-2025.

Cultural & linguistic diversity for effective scientific advice

The influence of cultural and linguistic context on the practice of scientific advice. Creation of an international French-speaking network in scientific advice. *Focus of future European chapter. Funding research projects on this topic (INCLUSIVE project; Claire Craig, Oxford).*

Science advice at the local (cities) level

The exercise of scientific advice at different levels of government – globally, nationally, regionally and locally, including citizen participation. Chief Scientists appointed in cities (Victoriaville, Longueuil, Nicolet....UMQ). *Future North American chapter –Trio of cities in Canada, USA, Mexico).*

Promoting science diplomacy...and key to continue to built capacity in efficient science advice globally.

Current INGSA chapters

Three chapters: Africa, Asia, Latin America & the Caribbean.

Associated working groups include Foreign Ministries Science & Technology Advice Network (FMSTAN).

New: Réseau Francophone International en Conseil Scientifique (RIFCS)... Key: create a network & capacity building. Impact of culture & language in French speaking regions (NA, Europe, Africa).

A New chapter under development: Scientific advice & expertise for proximity governments

North American Chapter (INGSA) to focus on science advice at local, city levels. Ongoing work towards a pilot project to assess the status of science advice at the city/local level, identify the needs for such a network and establish its structure & governance.

- **Organization of a workshops in the margin of international events (the latest during the first International Cities Summit of the Americas in Denver (24 to 28 April 2023); a session on scientific advice to cities during the AAAS Conference in Washington (March 2023; earlier sessions in Seattle).**

Learning from Quebec:

Development of initiatives on scientific advice in cities.

- **Establishment of chief scientist or scientific advisor positions in cities: Victoriaville since February 2023; Longueuil, Laval, Nicolet, Gatineau to come, and the Union of Quebec Municipalities.**
- **Survey on data use by Québec cities. They see the benefits of collecting data and producing dashboards, but they don't all have the resources to do so.**

Concluding remarks

Critically important to promote science advice to governments... from local (cities) to global (international organizations) levels.

- **Elected officials and high level policy makers should be enticed to acquire basic knowledge about the scientific method & sciences. Science advisors of all types should help .**
- **Critically important for scientists & the scientific community to have a much better knowledge of the functioning of the government. Most are rather naïve in that regard. A role for science advisors of all types here as well.**
- **INGSA as a mean for chief scientists, scientific advisors, academia to exchange on best practices, constraints, capacity building & success stories.**
- **Work in close collaborations with citizens. Take their opinions & ideas into account. Truly integrate them into a science-government-citizen's dynamic. 'A golden triangle'.**

Merci!

Evidence Informed Policy Making

Euan Adie

CEO, Overton, United Kingdom

Evidence Informed Policy Making – following the data

Euan Adie (euan@overton.io)
AESIS Societal Impact of Science
Conference, 20th June 2023

This presentation will cover...

- The Overton database (briefly)
- What can we tell from the data?
- How are we trying to improve things?

Overton staff backgrounds

- Research impact & researcher support (Calgary, LSE)
- Bibliometrics & altmetrics (Dimensions, altmetric.com)
- Academic / policy engagement (Imperial, Nottingham)
- Think tanks, IGOs & government (Local Government Information Unit, IISS, EU Commission)

Overton for... About Blog Help Data partnerships Request free tr

Our team

Management

Euan Adie, Founder and Director
Euan is the managing director of Overton, which he founded in 2019. He previously founded and spent six years growing Altmetric, which is now owned by Digital Science, and before that worked at Nature Publishing Group and as a researcher in medical genetics (despite not knowing how to hold a pipette properly) at the University of Edinburgh.

Terry Bucknell, Commercial
Terry is the sales guy. He cut his teeth at Digital Science, where he met me. He's still a librarian at heart, but he's kick out of helping people to find what they need. Terry's first degree was in Library Studies, he started three PhDs (without ever finishing a word of a thesis) before he became a sales guy.

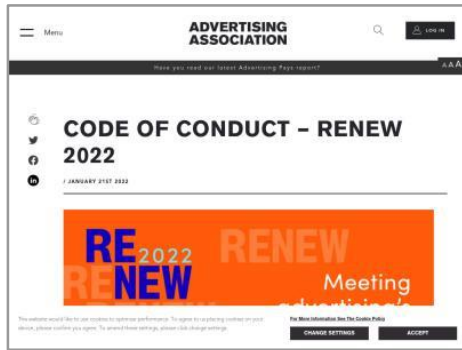

Jennifer Glover, Head of Operations
Jennifer keeps things running smoothly at Overton, turning her hand to anything from marketing to finance to recruitment depending on what the day brings – such is life in a startup! Before joining Overton, she worked at think tank LGIU helping councils create and influence government policy and at company intelligence platform Beauhurst during its startup phase. Jennifer has an MSc in Public Policy from Birkbeck College.

Natalia Forrest, Acting Head of Operations
Natalia is keeping the ship steady while Jennifer is on maternity leave. She has been fortunate to work across a range of industries including Defence, Government, Higher Education and Think Tanks. She has a Master's of International Studies from the University of Sydney and an MBA (Exec).

Tech

Nick Thompson, Software Engineer
Nick develops and maintains features in the Overton app, and ensures everything runs as smoothly as possible on our servers. He loves to code.

Matt Difford, Software Engineer
Matt is a member of our development team. He loves to code.

Carolyn Whitzman at University of Ottawa

This name and affiliation were mentioned in this document.

The research that I have, which comes from the great *Carolyn Whitzman*, the housing professor at the University of Ottawa, shows us that for every one unit of affordable housing—"affordable" defined by the Canada Mortgage and Housing Corp.—that is being built in Canada right now, we are losing seven. When large real estate investment trusts swoop into a community, buy up a property that a landlord has not maintained effectively— in some cases, for decades—and turfs them out on the street, it's called a renoviction, and it's one of the things that my friends in government are talking about addressing with this bill. But it's one thing to increase fines on individuals or companies—\$100,000 for individuals; \$500,000 for companies. That's negative liberty. That's one thing. But where's the positive liberty? Where's the support you give people? It's through rental protection bylaws.

DHS

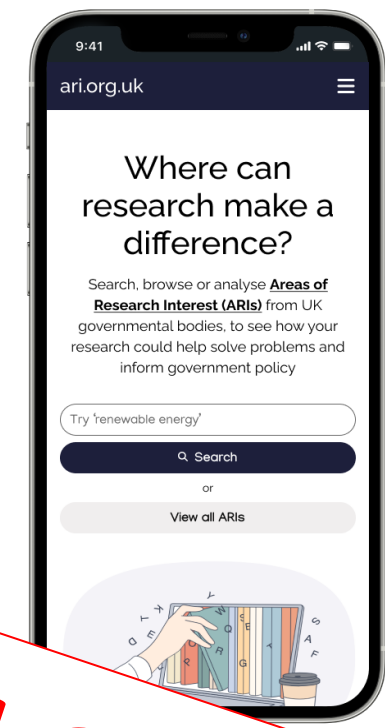

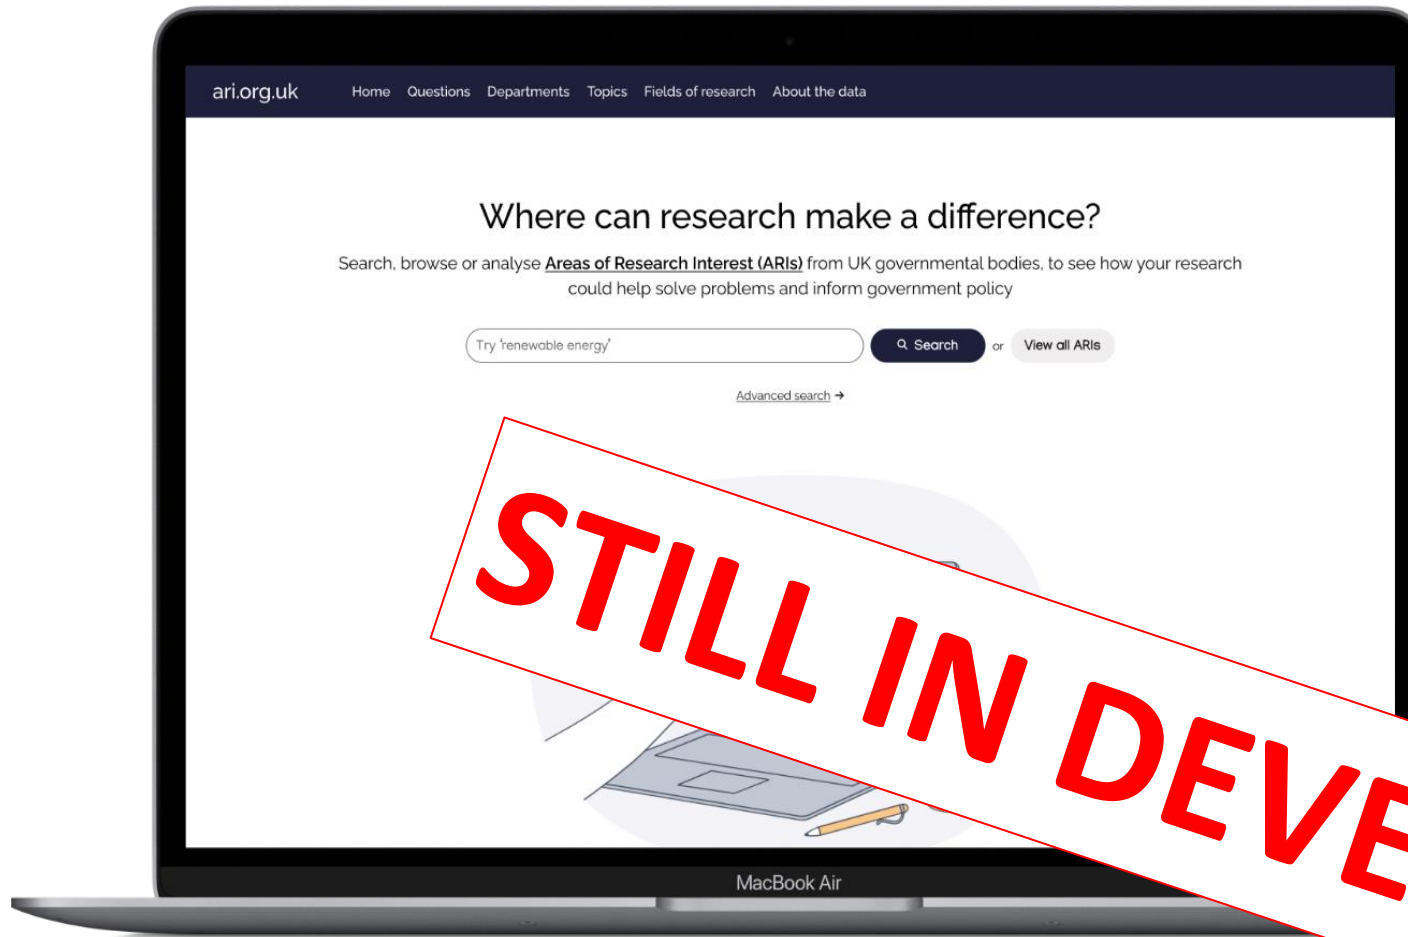

Do all subgroups of the target population participate in and perceive value and utility of national convenings as mechanisms of information exchange about security and risk resilience? What gaps and unmet needs, if any, exist?

DHS

Does level of Independent Test Agent (ITA) support throughout the acquisition lifecycle correlate with the adequacy of an acquisition program's test and evaluation outputs (operational effectiveness, suitability, and resilience)?

DHS

How accurate were DHS's estimates of the benefits and costs in the regulatory impact analysis for the regulation, "Standards to Prevent, Detect, and Respond to Sexual Abuse and Assault in Confinement Facilities"?

STILL IN DEVELOPMENT

overton

Goals

- Help policymakers find experts directly & through existing networks
- Make government research priorities more visible to funders, brokers
- Help researchers be in the right place at the right time, talking to the right people

Large language models & “embeddings”

We fine tune off the shelf models – relating language from policy documents with the academic language in the research we can see they cite in Overton

POTATO

Treating adolescents with social anxiety
disorder
Non-pharmacological treatments for ADHD

Makes relevant research priorities easier for academics to find

Automatically match questions with existing projects, funders and experts

What are the environmental and other local impacts of significant amounts of new renewable generation capacity being built in the UK?

Department for Business, Environment & Industrial Strategy

Natural Environment and Offshore Wind (NEOW)

The project focuses on understanding the environmental impacts of offshore wind expansion, which is a form of renewable generation capacity in the UK.

Dr Agota Mockute
University of Hull

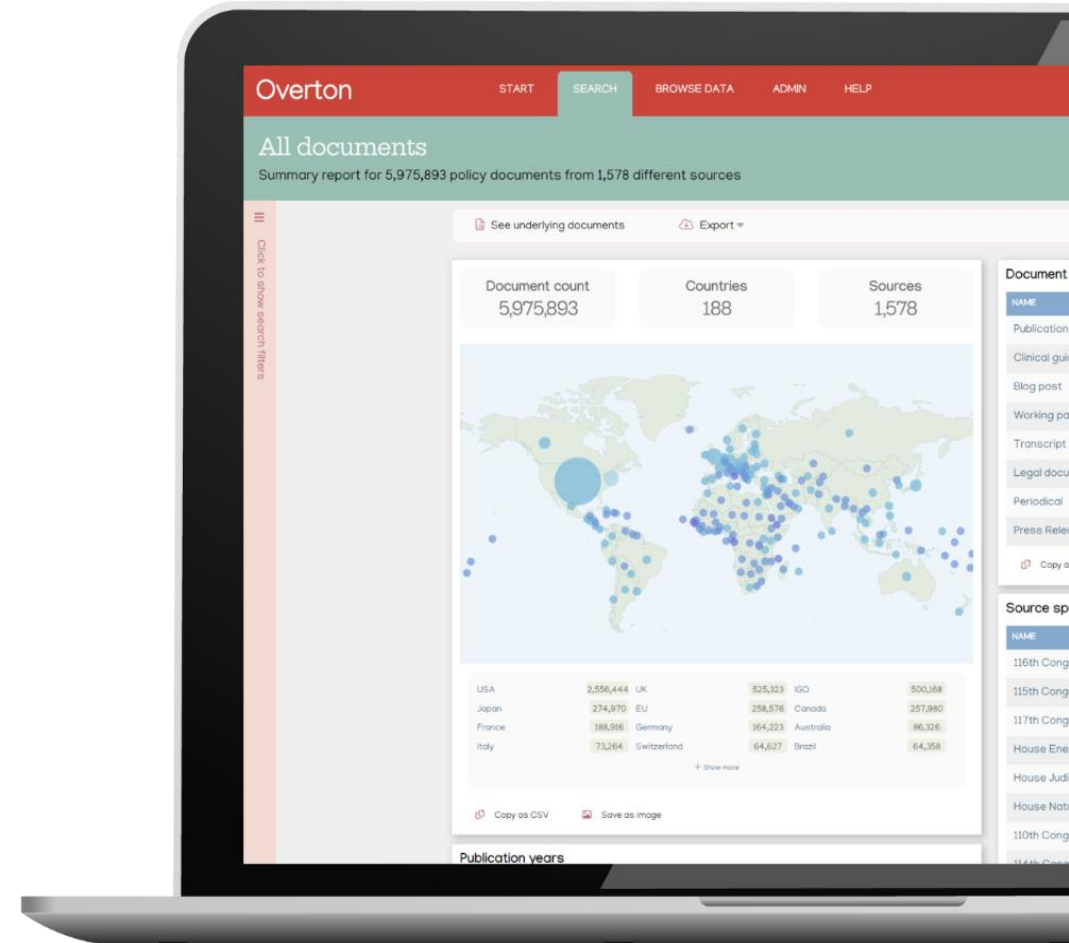

Next steps

- Finishing, launching UK site & releasing open data
- Looking at research questions from a wider set of organizations and countries
- Finding, working with new partners – on both supply and demand side of evidence for policy

Thank you!

ewan@overton.io

Recommendation

“Let scientists create skills to better integrate citizen needs into their government science advice.”
