

Assessing the Societal Impact of Research  
6-8 November 2019, King's College, London

# AESIS AUTUMN COURSE 2019

Methods and Instruments for Assessing  
the Societal Impact of Research

6-8 November, London

**AESIS**  
NETWORK FOR  
ADVANCING & EVALUATING THE SOCIETAL IMPACT OF SCIENCE

**KING'S**  
*College*  
**LONDON**

Assessing the Societal Impact of Research  
6-8 November 2019, King's College, London

# DAY 1

**#ASIR19**  
**@AESISNET**

**WiFi:**  
**PASSWORD:**

## OVERVIEW OF THE PROGRAMME

- Day 1**    **Introductions**  
**Defining and assessing Institute's Strengths**  
**Introduction to the Case Study**  
**Interactive discussions**
- Day 2    Integrating impact indicators in strategy  
Preparation Case Study  
Research Information Systems and metrics  
Interactive discussions
- Day 3    Disciplinary differences and conflicting interests  
Case Study Presentation  
Closing  
Social programme

Assessing the Societal Impact of Research  
6-8 November 2019, King's College, London

**Welcome and introduction to the course**

**Martin Kirk**

Director of KCLs Research and  
Researchers Function

**AESIS**

## Why

**KCL role includes:** REF, metrics, knowledge exchange/ public engagement, impact, commercialization,

**Aim for this meeting:** Hope to meet new colleagues/expand network gather new ideas on systems/tools in the impact metrics space

# INTRODUCTION BY THE PARTICIPANTS

In groups, discuss for 10 minutes:

1. What is your role in the science ecosystem and your own institute?
2. What are your most pressing questions and what do you want to take away?

Assessing the Societal Impact of Research  
6-8 November 2019, King's College, London

**The social good of universities**

**Jonathan Grant**

Vice-President (Service) and Professor of  
Public Policy at KCL

**AESIS**

# The social good of universities

# Introducing Service-led learning at King's

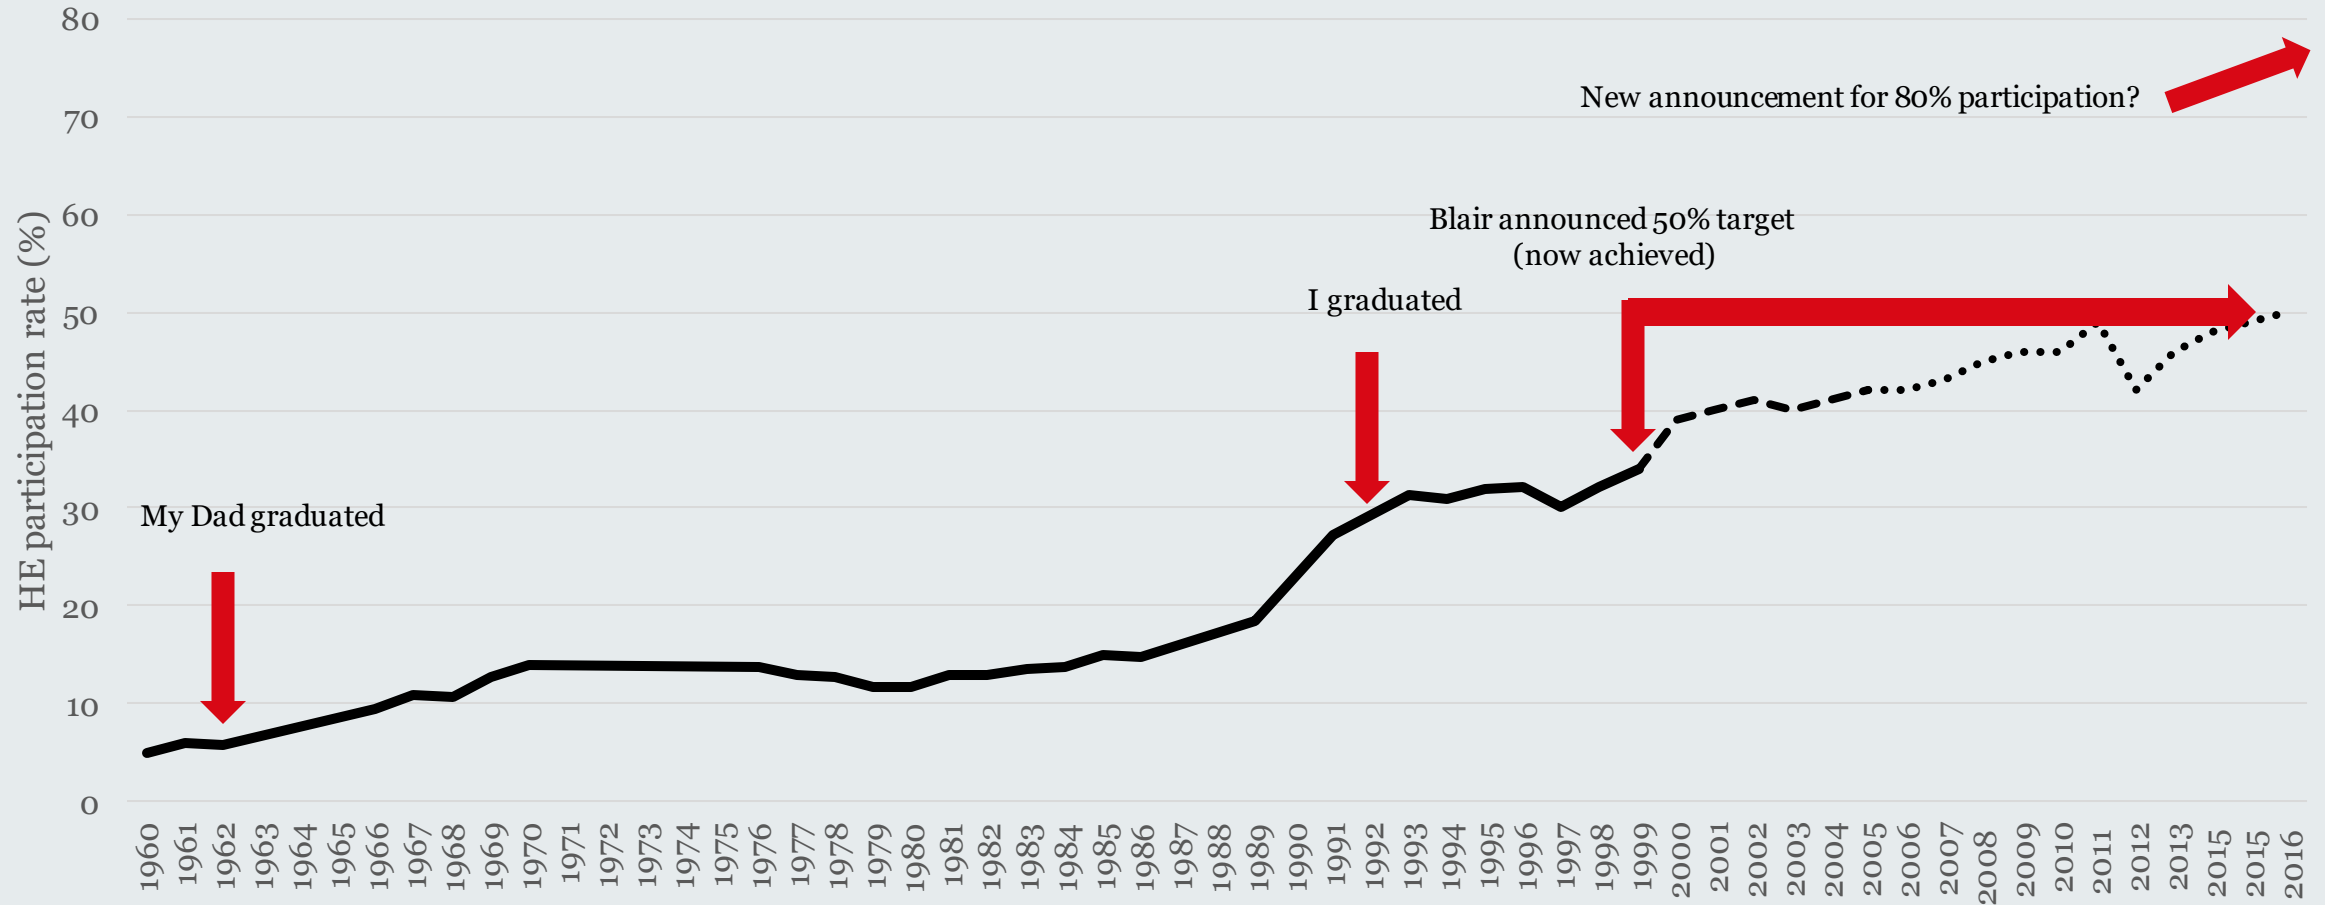

**YOU CAN EMPOWER THE NEXT GENERATION OF CIVIC LEADERS**

# Higher education for (all) the people

Long-term trend in HE participation in the UK (1960-2016)

Line is drawn from different sources. Solid line is from IFS (2010) Working Paper W10/04 (<https://www.ifs.org.uk/wps/wp1004.pdf>). Data extracted from Figure 2 using <http://www.graphreader.com> so may not be entirely accurate. Dashed line is from Figure 1 of House of Commons Public Accounts Committee report on Widening Participation (<https://publications.parliament.uk/pa/cm200809/cmselect/cmpublicacc/226/22602.htm>), Data estimate by reading graph. Dotted line is from DfS briefing (<https://www.gov.uk/government/statistics/participation-rates-in-higher-education-2006-to-2017>) using direct data source.

**Research impact**

# Project aims

1. To make the impact case studies freely available in a form and format to enable researchers to carry out analysis using a range of techniques and methods
2. Carry out a synthetic analysis of the impact case studies to provide evidence on the impact of research in HEIs

# Searchable database of impact case studies

<http://impact.ref.ac.uk/CaseStudies/>

The screenshot shows the website's header with the REF2014 logo and navigation links. The main content area features a search bar and a 'Browse the index' section with tabs for different categories. The 'Submitting Institution' tab is active, displaying a list of institutions grouped by region (East, East Midlands, London) with their respective case study counts.

**REF2014 impact case studies** Research Excellence Framework

# UK universities have a global impact ...

## ... and a local impact

Proportion of case studies with city level impact to number of case studies submitted to REF 2014 (HEI's with 10 or fewer *submissions* excluded)

## **There are a diverse range of impact pathways**

---

To be fair to all disciplines, this implies that you will need c4,000 metrics to capture the diversity of pathways between research and societal impact

**Volunteering**

# Volunteering

## King's Global Day of Service March 2019

In line with Vision 2029, King's alumni are shaping the 21<sup>st</sup> Century as creative, thoughtful and engaged citizens who are part of an international community that serves the world. Throughout the month of May King's alumni took part in the inaugural Global Day of Service and volunteered to clean up parks, focus on global health, helped combat food insecurity and much more.

190 Volunteers

9 Service events in London

Beijing, China

London, UK

15 International events across five continents

Los Angeles, USA

Hong Kong, China

635 Service hours completed

5k Estimated economic impact

Lahore, Pakistan

Port of Spain, Trinidad & Tobago

King's is the first university in the UK to run a service event at this level for alumni, students, staff and friends of the University – internationally, locally and on an individual level

**Environmental sustainability**

# Environmental sustainability

King's has reduced its carbon emissions by 37% between 2005/06 and 2017/18

We have removed beef from canteen menus, and have a 100% plant-based café

We have a network of over 300 Sustainability Champions

Our Residences are pioneering a Sustainable Living Community

We have committed to be net zero carbon by 2025

Our directly purchased electricity is from 100% UK wind power

*So how do we assess the overall impact of universities?*

# Similar (but not the same) set of tools to assessing research impact

- Benchmarking
- Surveys
- Interviews
- ~~Bibliometrics~~
- Case studies
- Economic analysis
- ~~Text mining~~

# Benchmarking: THE SDG ranking

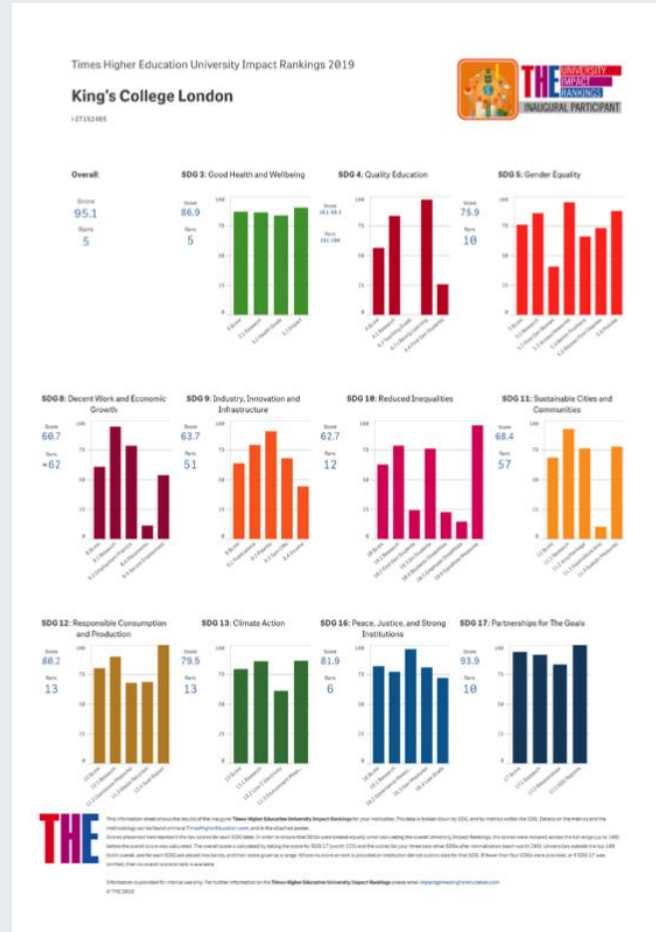

+ TOP 3 SCORES

**TOP 10 OVERALL PARTNERSHIPS FOR THE GOALS + TOP 3 SCORES**

2019 rank	Institution	Country/region	Score
1	University of Auckland	New Zealand	97.2
2	McMaster University	Canada	96.6
=3	University of British Columbia	Canada	96.2
=3	University of Manchester	United Kingdom	96.2
5	King's College London	United Kingdom	95.1
6	University of Gothenburg	Sweden	95.0
=7	KTH Royal Institute of Technology	Sweden	94.6
=7	University of Montreal	Canada	94.6
9	University of Bologna	Italy	94.3
10	University of Hong Kong	Hong Kong	94.1

[www.thewur.com](http://www.thewur.com)  
[#THEglobalimpact](https://twitter.com/thewur)

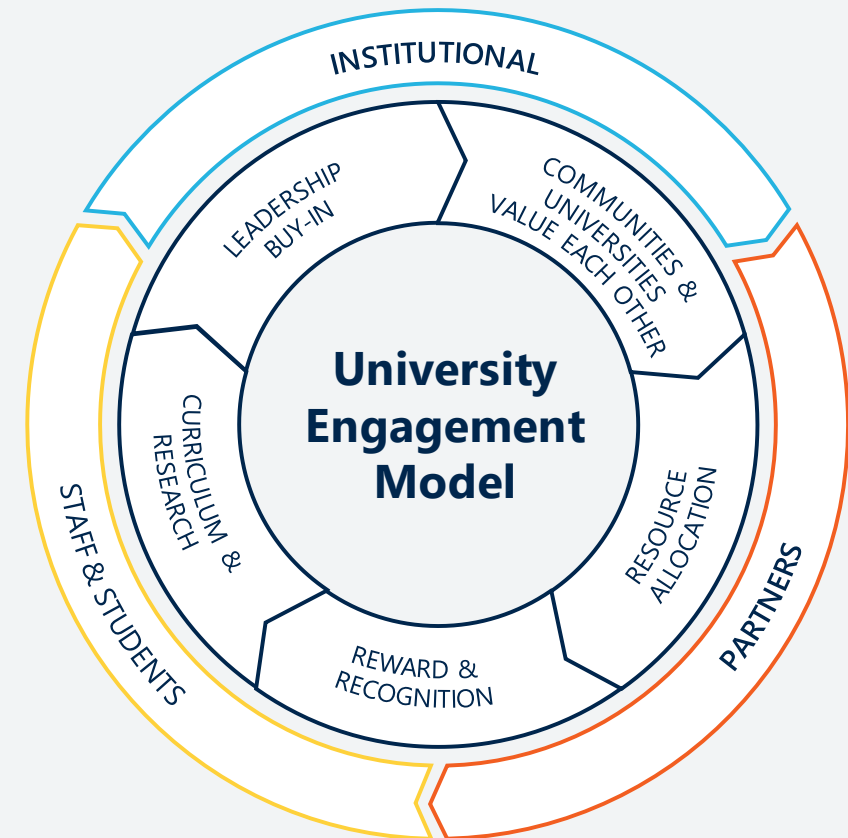

# Benchmarking: King's-Melbourne-Chicago framework

A simple mechanism, that takes a holistic approach to measure the breadth and depth of an institution's engagement activities.

## ENGAGEMENT INDICATORS

- 1 Evidence of strategic engagement
- 2 Partner esteem
- 3 % pre-university students to the university's undergraduate cohort participating in a university preparedness programmes to strategic social benefit outcomes
- 4 % of students and staff engaged in institute run volunteering/service programmes
- 5 Ratio of non-academic total mentions divided by the total outputs tracked
- 6 % curriculum dedicated to engagement/service learning
- 7 % negotiable spend on procurement linked to strategic social benefit outcomes
- 8 Carbon footprint

## SECTOR BEHAVIOUR CHANGE

# Economic analysis

## The Economic Impact of Britain's Global University

[www.nottingham.ac.uk/economic-impact](http://www.nottingham.ac.uk/economic-impact)

### Our economic impact in detail

Total economic impact  
(GDP contribution (GVA + student  
spending impacts) + tax revenue)

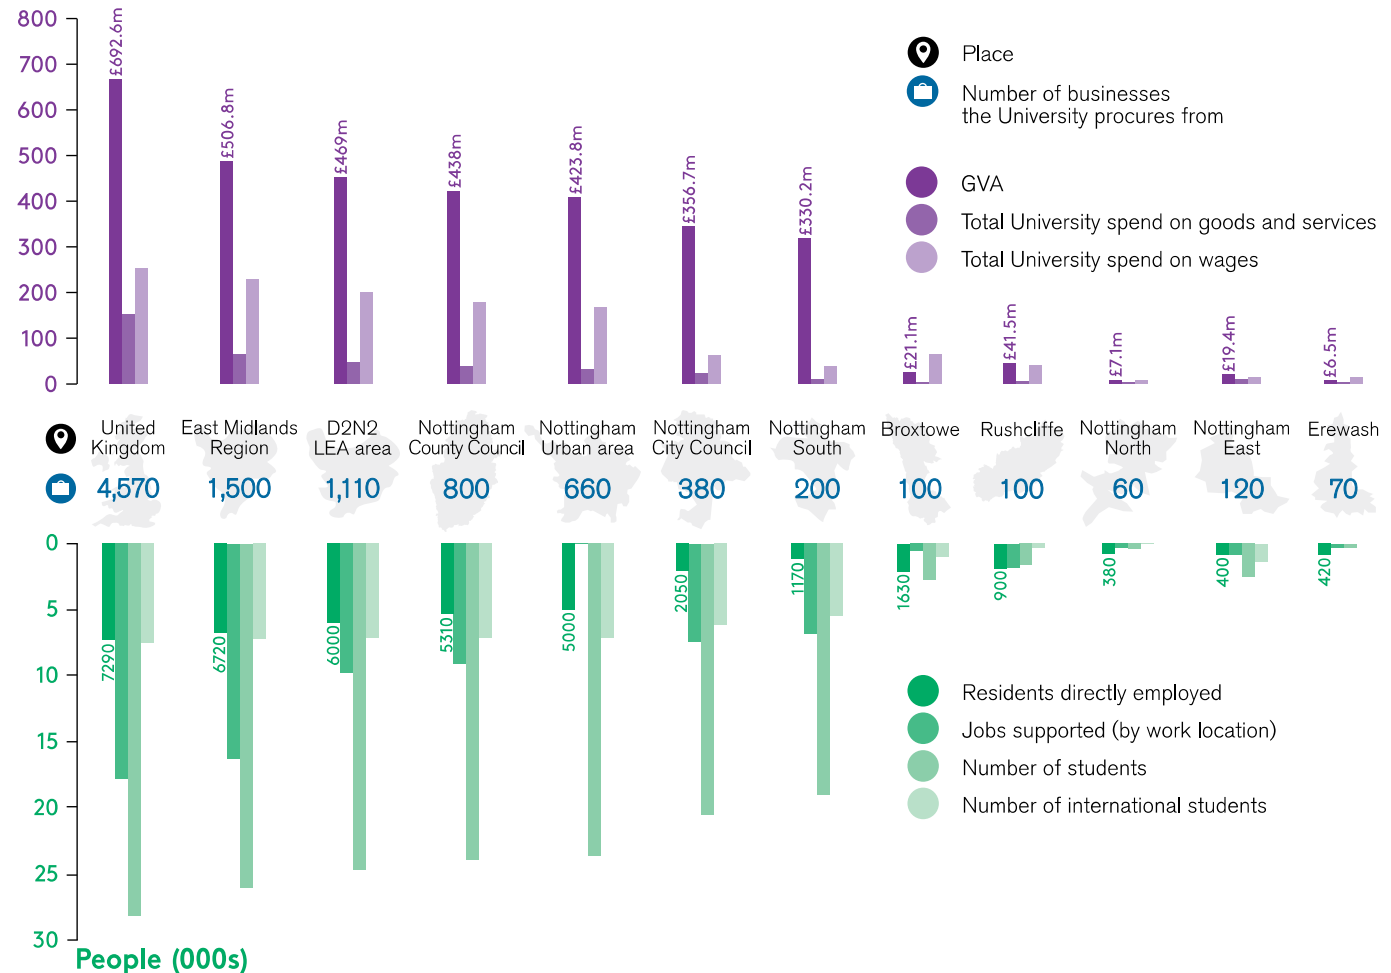

GDP contribution  
(GVA + student spending impacts)

Tax revenues generated

£m

# Similar set of tools challenges to assessing research impact

# Similar set of objectives to assessing research impact

---

**Accountability** – To taxpayers, donors, etc

**Advocacy** – ‘Make the case’ for research funding

**Analysis** – What works in research funding?

**Allocation** – What to fund (institution, field, people, etc)

*So what have universities ever done for us?*

*So what have universities ever done for us?*

Any  
questions?

## Total scores societal & communicative university

# Developing an Impact Evaluation System

## Issues

### 1: Conflicts of interest

- ✓ Societal Impact vs. Scientific quality?
- ✓ Conflicting interests of Funders:
  - ✓ Ministry of Science vs. Ministry of economic affairs
  - ✓ Regional needs vs. (inter)national needs
  - ✓ The national interest vs. Scientific integrity
- ✓ Management vision vs. Individual academic ambition

## Issues

### 2: Impact outcomes

- ✓ The institution's profile vs. National frameworks?
- ✓ Outcome for society vs. outcome for business
- ✓ Outcome for the institute strategy vs. Rankings

## Issues

### 3: Operationalisation

How to create a framework that:

- ✓ Aligns with your existing Research Information System or needs a new Research Information System?
- ✓ Is aware of the impact on public funding and Rankings?
- ✓ Can be integrated in your internal appraisal system?
- ✓ Is flexible to your research priorities and area's?

Assessing the Societal Impact of Research  
6-8 November 2019, King's College, London

## Methods and techniques of assessing societal impact

**Ed Noijons**

Senior researcher and Deputy Director of  
CWTS for Projects

# Advanced bibliometric analysis in the context of research evaluation: Area Based Connectedness (ABC) to society

**Ed Noyons**

AESIS Methods & Instruments for Assessing the Societal Impact of Research,  
King's College London, Nov 6-8, 2019

Universiteit  
Leiden

# Baseline

Monitoring Non-scientific impacts of actors by  
Area-Based Connectedness (ABC) to society

Data:

- Web of Science (CWTS version)
- Publication level classification
- Altmetrics data

# Key assumptions

- Societal impact too diverse and complicated to assess in a ‘traditional’ quantitative way;
- Societal connectedness may be a more productive approach;
- Connectedness (same as societal impact) is not a merit of one actor only. It is a credit of a community/ research area.

Which one is more important?

# How to measure connectedness of research?

- ***Academic output*** connected to ***society***;
- Through signals between ***research outputs*** and ***society***;
- Signals from ***both*** sides;
- Each signal represents a certain link/ connection/ interaction, a ***dimension of connectedness***.

# Signals and dimensions

Signal	Dimension
Papers (co-)authored by industry	Industry R&D
Papers published in local languages	Local interest or focus
Papers cited by patents	Technological or commercial interest
Papers mentioned on twitter (or other social media)	Link to general public
Papers mentioned in policy documents	Relating to political issues
Papers mentioned in news	Link to general public
...	...

# **How to use these signals: Area-based connectedness**

# About the communities/ research areas?

- Research is a collaborative effort;
- It's the ***community*** that has impact/ is connected, ***not*** the individual actor (sandbag);
- Therefore, we should measure the interactions at the level of ***research areas*** (“walls of sandbags”);
- How to define “walls of sandbags for flood defense”?

# Research areas (communities)

# Consider the WoS science landscape (publication based classification, 4000 clusters, areas)

Social Sci & Hum.

Maths & CompSci

Life & Earth

Biomedical & Health

Physical Sci & Engin.

# About each research area, we know:

- All info covered by its publications (journals, authors, affiliations, keywords, etc);
- **Total volume (number of P whole period);**
- Volume per year (trend);
- Other average stats (n authors, refs, affiliations, share International collaboration, ...);
- Impact (overall and per year)
- Interdisciplinarity?
- Internal coverage (proxy for database coverage)
- ...

# What else do we know about each cluster/area?

- The percentage of papers P (co-authored) by industry;
- The percentage of papers not published in English;
- The percentage of papers being cited by patents;
- The percentage of papers being tweeted;
- The percentage of papers mentioned in news items;
- The percentage of papers mentioned in policy documents;
- ...

# Some statistics (2014-2017) for signals

Dimension	Average WoS overall	Max value in an area
Policy	0.47%	19%
News	3.80%	49%
Industry R&D	4.53%	30%
Technology (cited by patents)	4.27%	41%
Non-English	2.99%	83%

# Back to the WoS science landscape (publication based classification, 4000 clusters)

Social Sci & Hum.

Maths & CompSci

Life & Earth

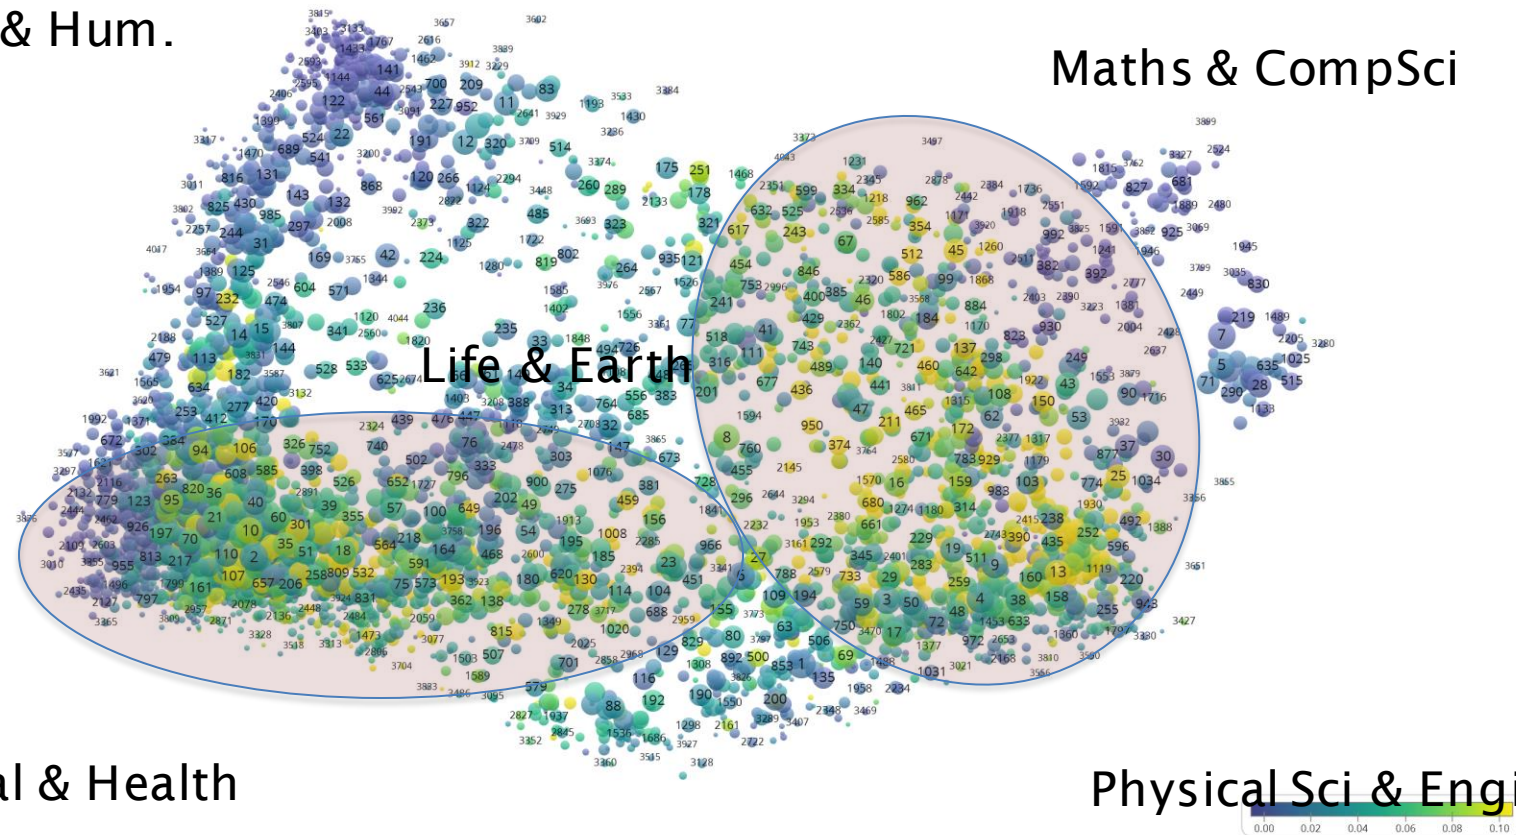

Biomedical & Health

Physical Sci & Engin.

# Share (co-)authored by industry

Social Sci & Hum.

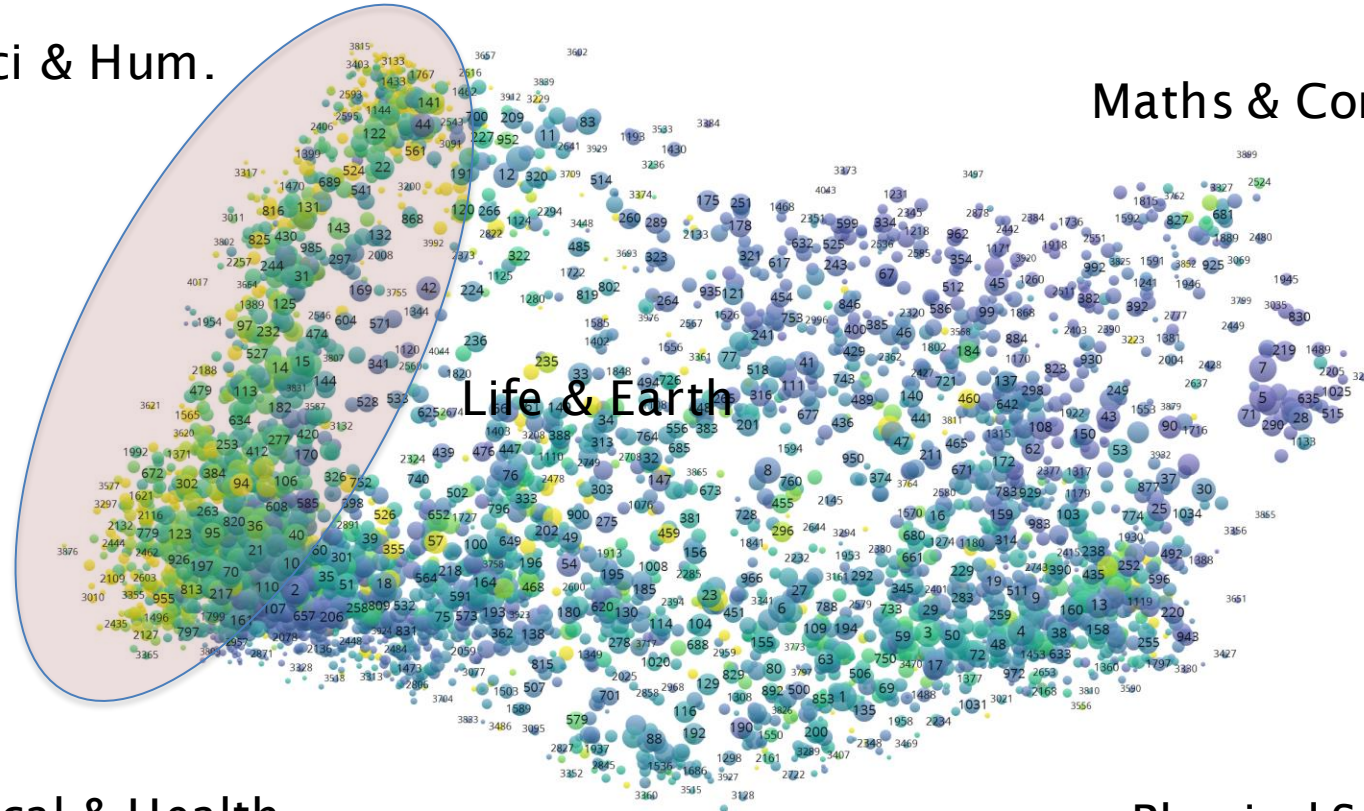

Maths & CompSci

# Share of papers not in English

Social Sci & Hum.

# **In practice: A case study a Faculty of Science**

# Faculty has 8 institutes

- Institute of Environmental Sciences
- Institute of Biology
- Center for Drug Research
- Institute of Advanced Computer Science
- Institute of Chemistry
- Institute of Physics
- Mathematical Institute
- Observatory

# Institute of Environmental Sciences (CML)

# Institute of Environmental Sciences (CML) within the entire landscape

VOSviewer

# Institute of Environmental Sciences (CML) output characterized by ABC(industry)

# Institute of Environmental Sciences (CML) output characterized by ABC(policy)

VOSviewer

08 0.010

# Area-based vs actor-based

- Actor-based: share of papers from actor A mentioned in policy docs
- Area-based: output of actor A, characterized by the area Z in which A is active (inherited from Z)

# ABC profile of Institute of Environmental Sciences (CML)

# ABC profile of Mathematical Institute

# Take away

- Altmetric data and other *non-scholarly data* provide a productive facility to monitor non-scientific 'impacts' of science actors using Area-Based Connectedness (**ABC**) to society;
- The ABC approach
  - Measures connectedness to society at the level of communities rather than the individual actors within;
  - Attributes more credit to content;
  - Is less vulnerable to manipulation and gaming.

# Maximising the societal impact of research: the use of impact indicators

- Institutional Impact Strategy
  - Responsible Metrics
- Snowball Metrics
  - As an example of pathways to impact
- Vertigo Ventures
  - As an example of evidencing impact

# Institutional Impact Strategy

- A brief reprise of
  - What impact is
  - What it isn't
  - How to facilitate it
- How to assess it
- Thanks to Dr Julie Bayley, University of Lincoln

# What is research impact?

'For the purposes of the REF, impact is defined as an effect on, change or benefit to the economy, society, culture, public policy or services, health, the environment or quality of life, beyond academia'

*Research England (REF)*

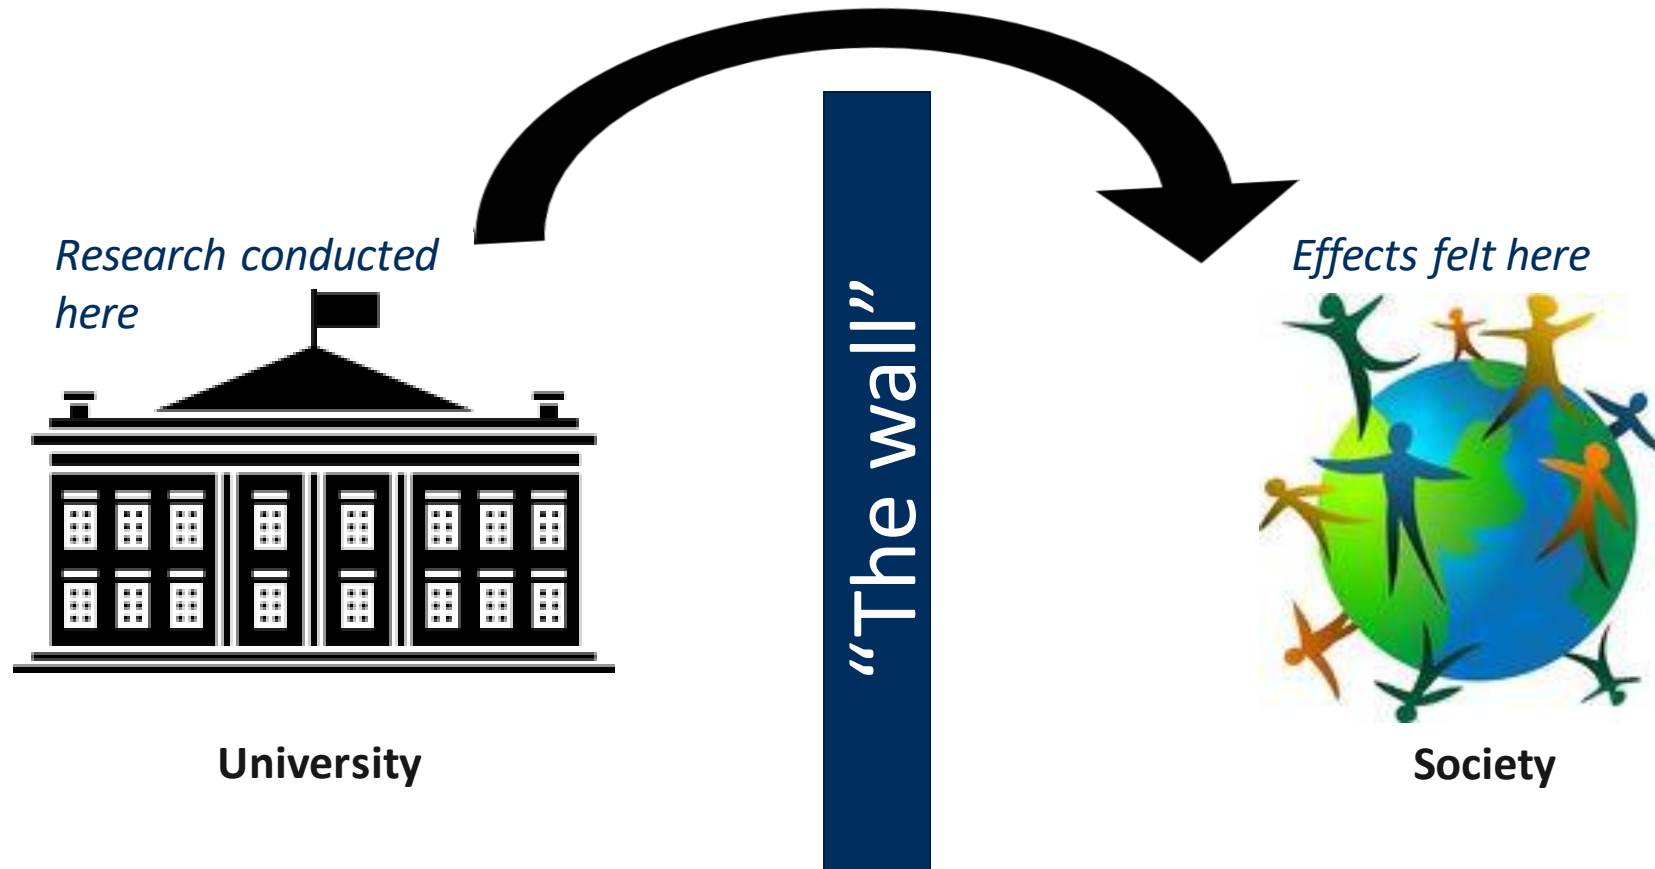

'the demonstrable contribution that excellent research makes to society and the economy'

*UK Research and Innovation*

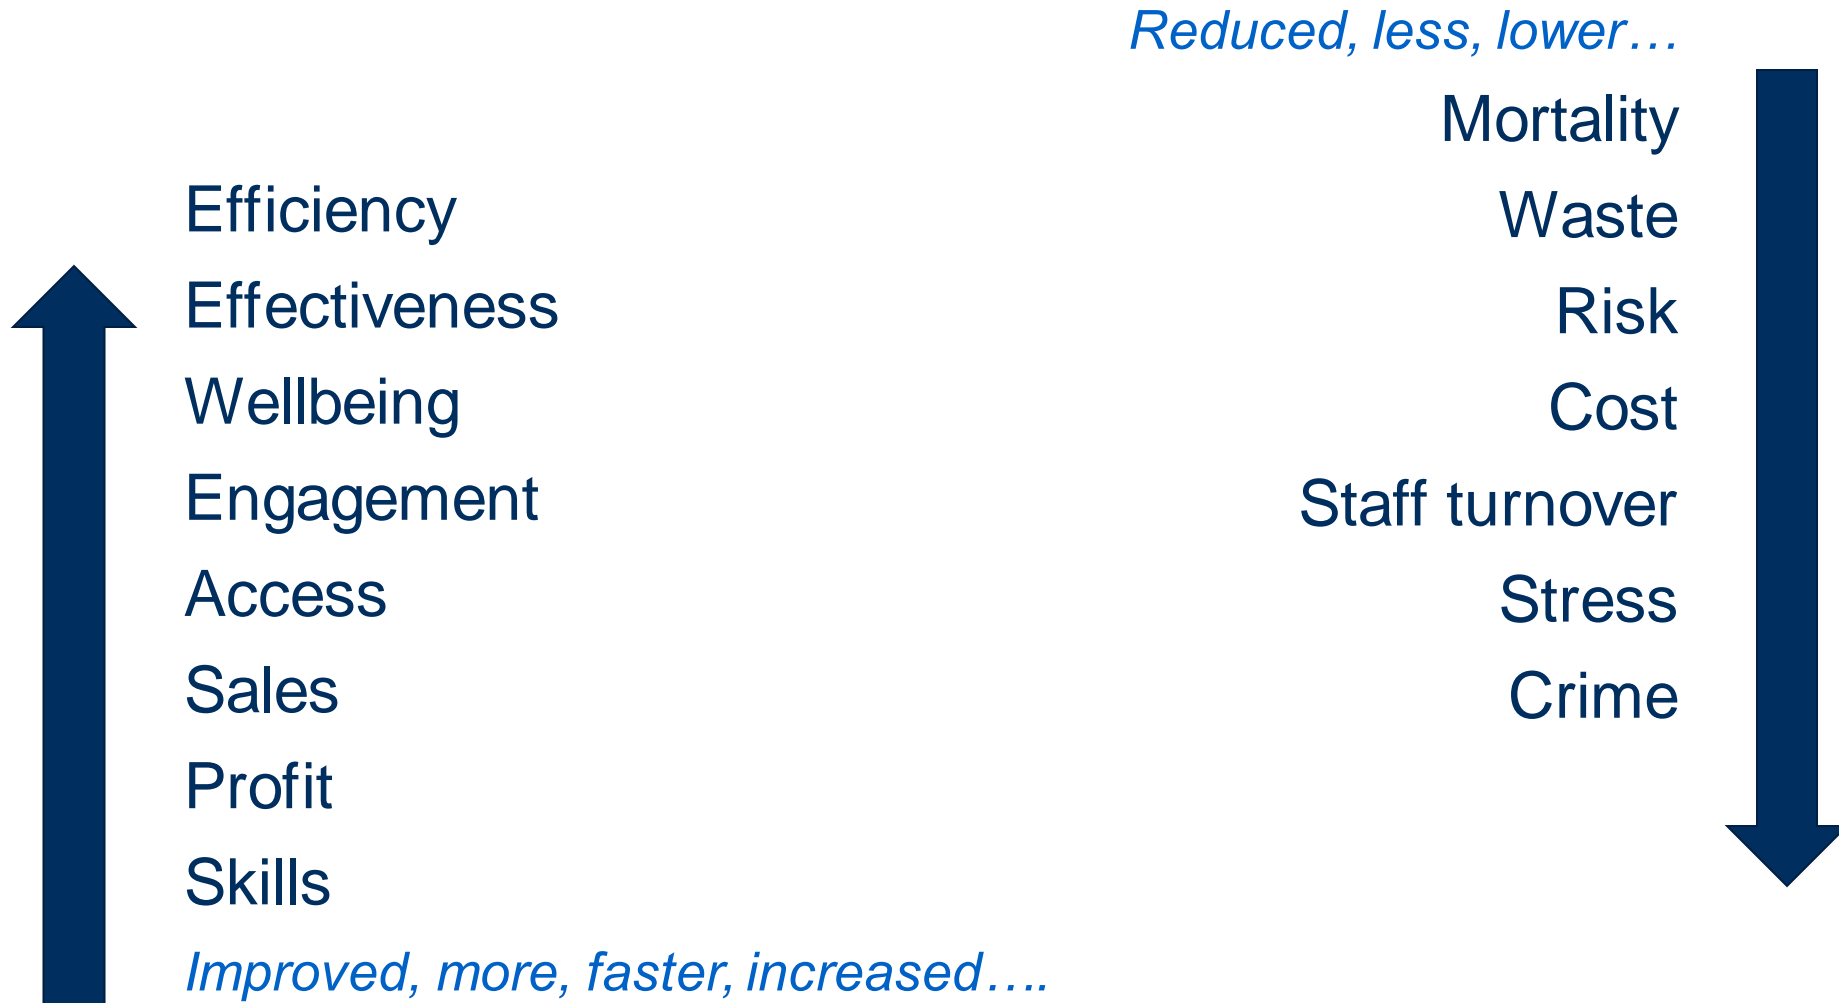

***The provable effects (benefits) of research in the 'real world'***

*Increased – Improved – Faster – Safer – Reduced – More – Cheaper – Less – Lower – Disrupted  
etc*

# The VERY shorthand version *(\*overly simplified and subject to disciplinary nuance, critical discourse, ethical reflections.....)*

# Impact is change (e.g.)

# Impact is not....

- ☒ Dissemination
- ☒ Academic interest, citations, or publications metrics
- ☒ Visibility, attention or reputation
- ☒ Neat, linear or without effort
- ☒ Just in the UK

# REF2021

Research  
Excellence  
Framework

- Case studies describing specific examples of impacts achieved during the assessment period (**1 August 2013 to 31 July 2020**), underpinned by research at the institution in the period **1 January 2000 to 31 December 2020**.
- Marked on reach and significance
- Ratings: Unclassified (no impact/ineligible) to 4\* (Outstanding)
- Worth 25% of total score

# 5 Impact Lessons

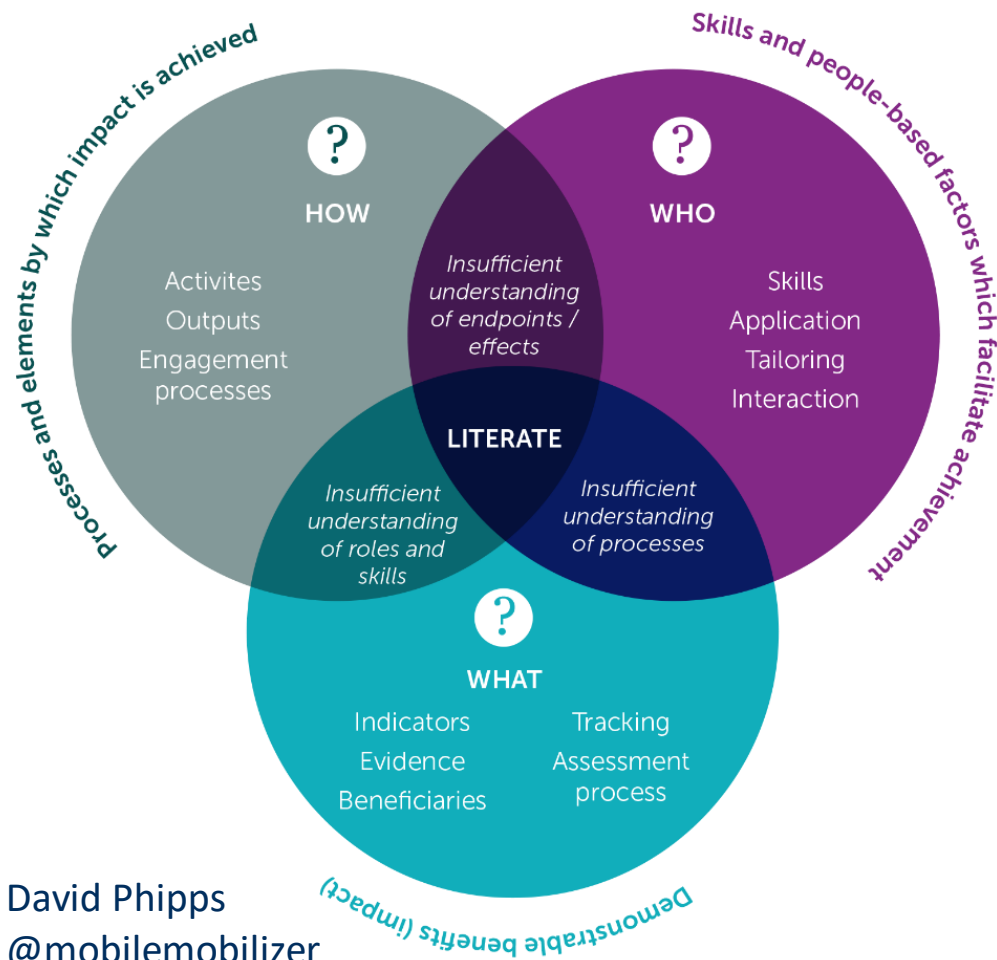

UNIVERSITY OF  
LINCOLN

**1. We are all custodians of impact;  
we each have a piece of the puzzle**

# Impact literacy

David Phipps  
@mobilemobilizer

Available at

<https://www.emeraldpublishing.com/resources/>

# Recognising complexity.....

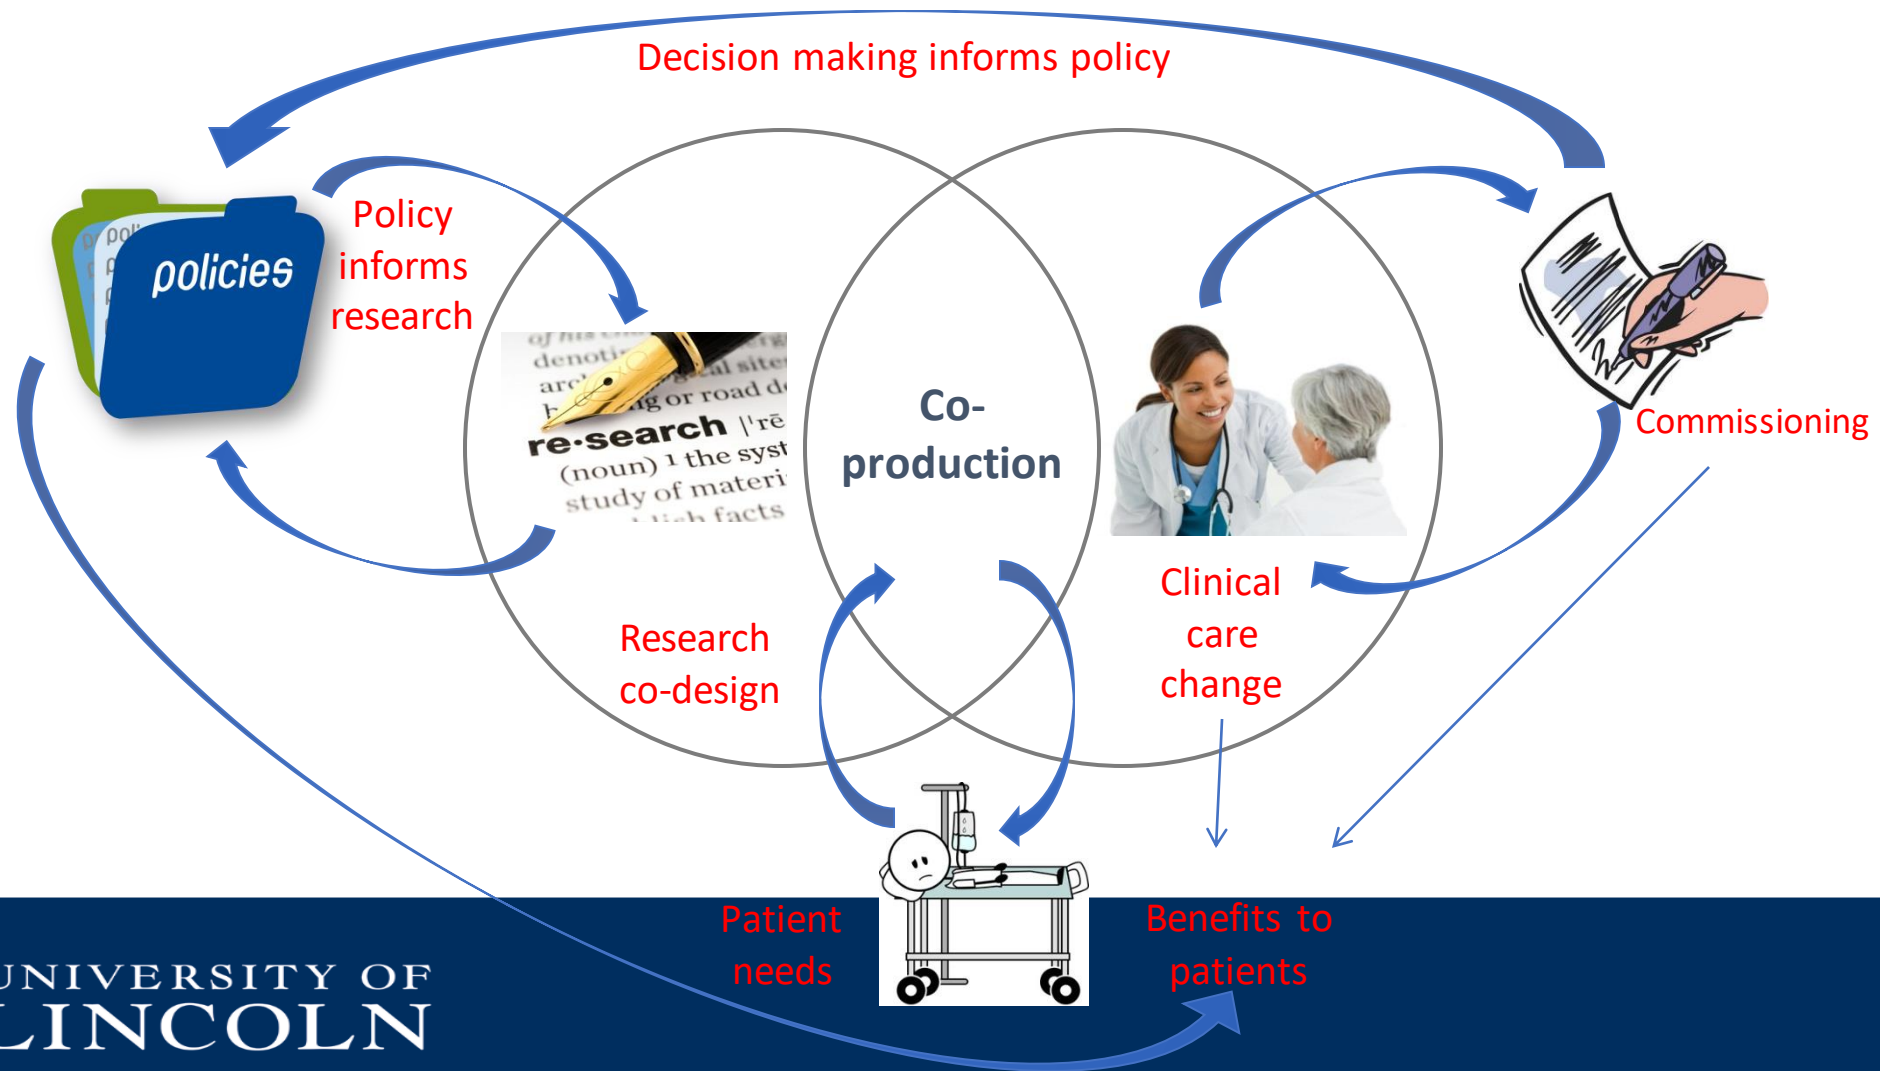

Knowledge transfer

Knowledge exchange

# Knowledge mobilisation

**2. We often speak different languages**

# Bibliometrics vs. impact measures

## Bibliometrics

### Demonstrate the scholarly attention for a research output

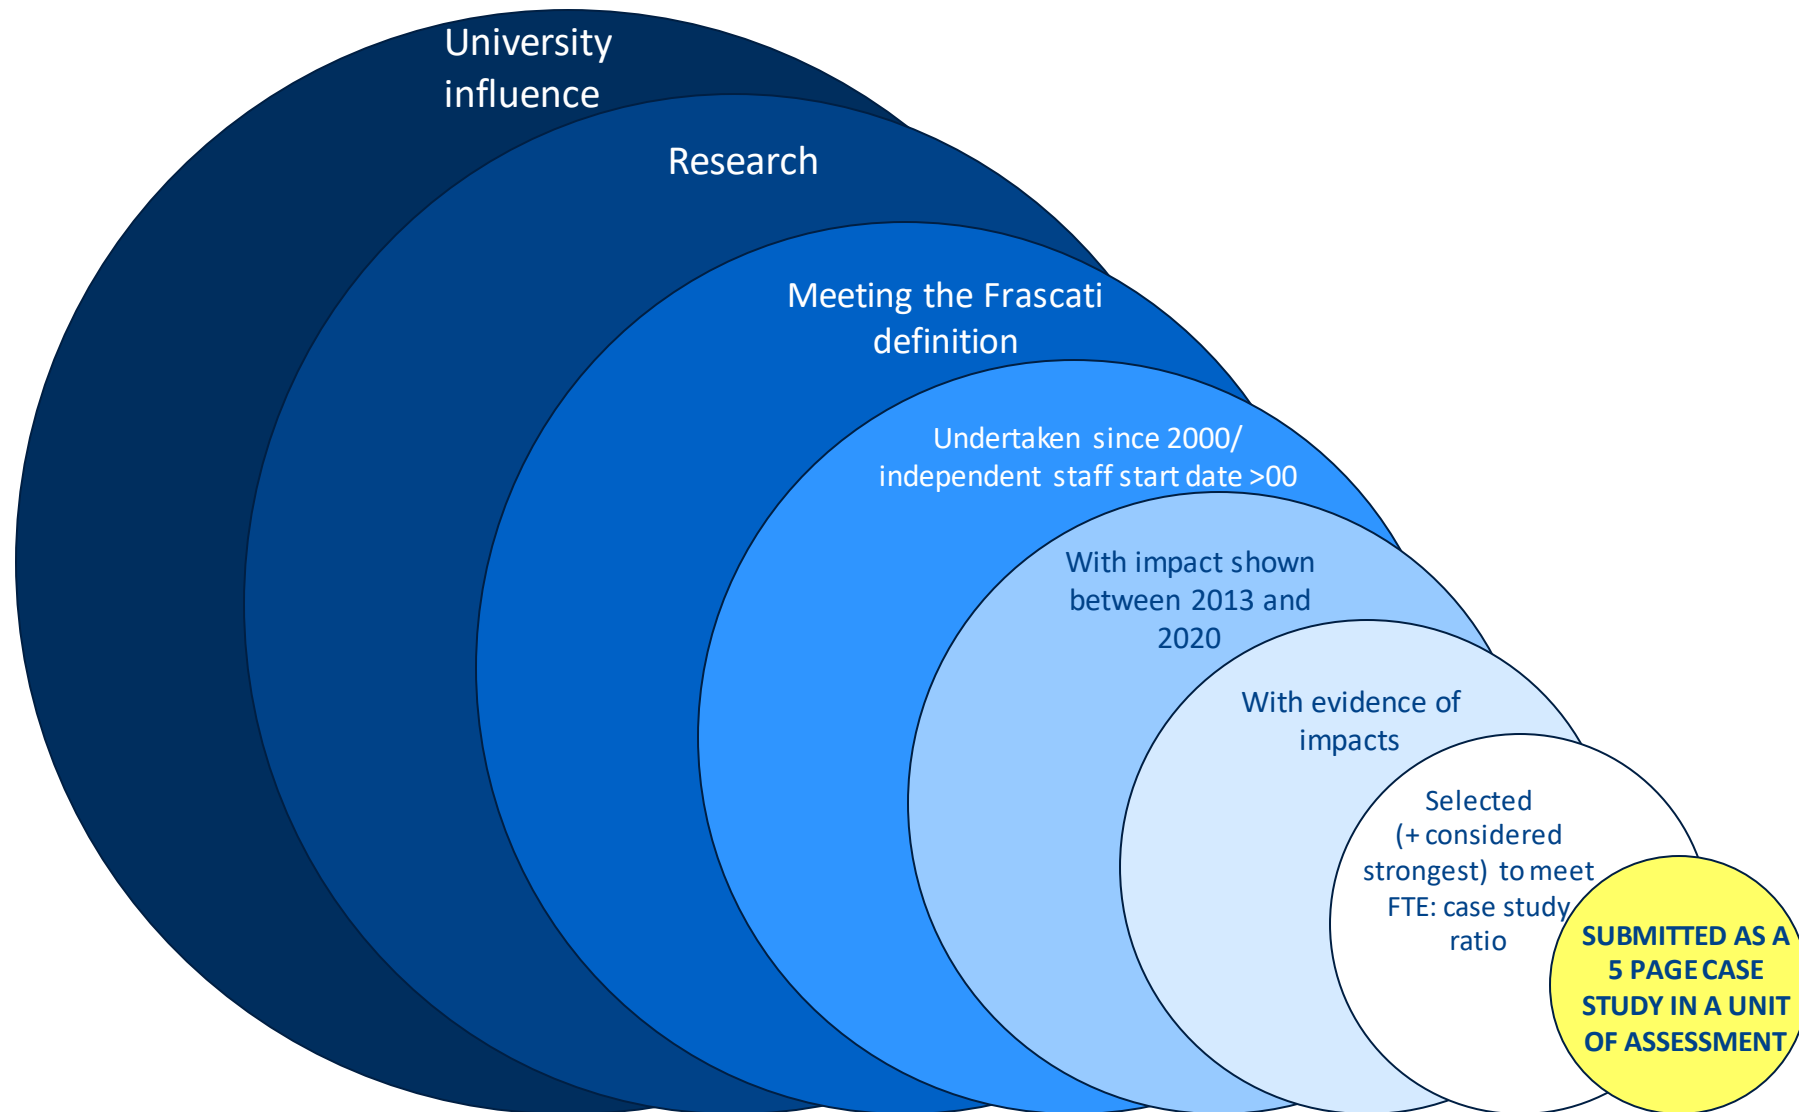

- Citations based metrics (*eg. citations, H index, field weighted citation impact, percentile rankings*) calculate influence by the number of citations against certain benchmarks.
- The basic unit of measurement therefore is the level of *academic referencing*.
- Bibliometrics do not demonstrate change

## Impact measures

### Demonstrate the nature and extent of research-led changes (impacts) beyond academia

- Impact does not always arise from a specific output; may be achieved through wider engagement during the research process
- Impact measures may be quantitative or qualitative
- Measurement is of anything which demonstrates change beyond academia, arising from research

# University influence vs. REF impact

**3. Impact case studies  
show the sausages, not  
the sausage factory**

# Challenges

- Impact resists templating
- Assumption the problem is 'lack of knowledge'
- Requires time and effort
- Requires knowledge broker and translation skills
- Insufficient implementation planning
- Can be an afterthought
- May meet with resistance

Available from:  
<https://www.kcl.ac.uk/policy-institute/assets/ref-impact.pdf>

- 60 impact topics
- 36 UoAs (Social Sciences in purple)
- Multidisciplinary research and impact

# 4. We need healthy, *connected* institutions

## Real Impact.

# Institutional Impact Strategy - Summary

A committed institution can embed processes to:

1. Maximise the production of 'impactful' research
2. Maximise the likelihood of uptake and adoption of research
3. Support monitoring, tracking and recording of impact
4. Build capacity through staff and student training.

- What impact is (and isn't)
- Their vision for impact, and how this connects to both institutional processes and job roles
- Formal expectations the institution must meet (eg. funding requirements, government assessments)
- How impact is not measurable by traditional markers of research attention (eg. impact factors, article citations)
- Recognition that not all research will have impact (or immediate impact), and that disciplines vary greatly in impact pathways and demonstrable effects.

However, communication cannot be in one direction only; senior leadership must listen carefully to those delivering impact to shape strategy and actively review delivery processes.

## Who 'does impact'?

Impact operates at all levels of an institution, and requires the support of individuals and teams in various capacities, including:

- **Knowledge producers:** researchers and academic staff who create the 'new knowledge' with the potential to make change
- **Leaders and strategy makers:** those in senior leadership positions who develop the vision, space and investment in impact
- **Impact specialists:** highly impact literate individuals with a deeper level of understanding about how impact operates
- **Knowledge brokers:** staff who actively connect research outwards beyond academia. This may be commercial in focus (eg. technology transfer, industry partnerships), non-commercial (eg. public engagement, policy development, charities, schools, hospitals) or a combination. NB commercially focused alone is not sufficient to make in institution impact 'healthy'
- **Research managers:** staff with a focus on broader institutional processes (such as funding and post award)
- **Information managers:** staff with a focus on coordinating and systematising the information associated with impact pathways
- **Communicators:** staff who showcase and improve visibility of research (such as marketing, communication, web teams and scholarly communications).

# Institutional Impact Strategy - Summary

Impact requires effort and skills in brokering research beyond academia. It's therefore necessary that institutions:

- a) Develop skills across the workforce, including academics (at all levels), research managers, those working in brokering roles (eg. public engagement, technology transfer) and built into student curricula
- b) Identify and coordinate specialised skills such as intellectual property and higher level impact experts

Dissemination is necessary but not sufficient to inform change. Impact can only happen if research is used beyond academia, so it is crucial to engage non-academics into the research process as early as possible. If stakeholder involvement is left until the end, the pathway to impact may be far harder and potentially unachievable. Collaboration across the research lifecycle helps:

- Frame research questions and methodology
- Root the research in what matters to stakeholders
- Understand, check and overturn assumptions about which changes (impacts) are most meaningful to those affected by the research
- Identify how outcomes can be best communicated to different audiences
- Identify any difficulties in putting research into practice
- Improve plans for and likelihood of uptake, adoption and implementation

A healthy impact institution will recognise, value and support engagement of those beyond the institution through a range of means such as:

- Developing formal arrangements with organisational partners (eg. contractual relationships with industry for joint posts, or formal agreements to adopt research)
- Developing relationships with potential audiences (eg. establishing networks of local businesses or healthcare organisations)
- Supporting individual level connections (eg. identifying and/or resourcing opportunities to build on-the-ground links)
- Showcasing research via institutional communication channels to strengthen visibility (eg. for policy makers attention)

# Responsible Metrics

- <https://sfdora.org/>
- <https://responsiblemetrics.org/>
- <http://www.leidenmanifesto.org/>
  
- And thanks to Lizzie Gadd for most of these slides!
- <https://thebibliomagician.wordpress.com/category/responsible-metrics/>

# Overview

- What are responsible metrics?
- Why should we care?
- How to implement a responsible metrics policy
- How to actually do metrics responsibly
- Who is responsible for responsible metrics?
- A call for research evaluation literacy

# Responsible metrics lead to better decisions

- Comparing SSH with STEM on citation counts...
- Comparing early & late-career academics on h-index...
- Judging anyone by their ResearchGate score...
- ...just isn't going to lead to a sensible decision, let alone a fair one.

# How to implement a responsible metrics policy

# The need to accept your policy is just the beginning

[This Photo](#) by Unknown Author is licensed under [CC BY-NC](#)

# The need to consider the advise- police-judge spectrum

[This Photo](#) by Unknown Author is licensed under [CC BY-SA](#)

[This Photo](#) by Unknown Author is licensed under [CC BY](#)

# The need for ownership at senior level

Senior University Managers involved in developing responsible metrics statements

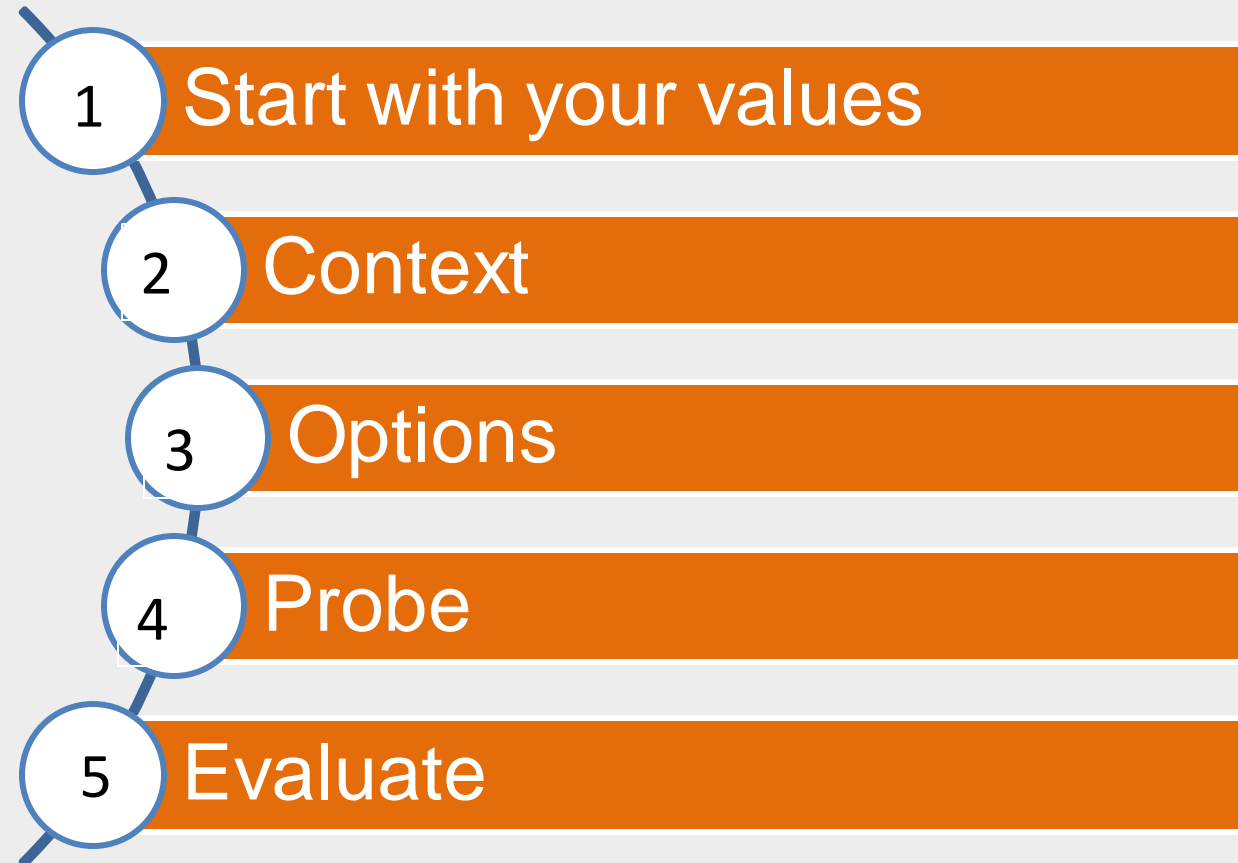

# The need to manage upwards

**From a mailing list:**

“...there’s a desire to have...a metric (and they are keen on just one) against which to evaluate the performance of our research... I’d be very interested to hear anyone else’s experiences ...in dealing with the expectations of senior managers with this sort of thing.”

# Introducing the INO SCOPE model

# START with what you value

- Not with the data you have available
  - The Streetlight Effect
- Not what others value
- University autonomy: use it or lose it

“If my h-index is the answer, what is the question?”

# The streetlight effect

# Understand who & why you're evaluating

Individual	Medium risk	Medium risk	High risk	High risk	High risk	High risk
Group	Medium risk	Medium risk	Medium risk	High risk	High risk	High risk
HEI	Low risk	Low risk	Medium risk	High risk	High risk	High risk
Country	Low risk	Low risk	Low risk	Medium risk	Medium risk	High risk
	Understand	Show off	Monitor	Compare	Incentivise	Reward

Figure 1. Risks associated with metric use in various settings

Low risk	Low risk
Medium risk	Medium risk
High risk	High risk

# Do we need to evaluate at all?

- Huge growth in incentivising behaviour through measurement
- Campbell's Law: "The way you measure me is the way I'll behave"
- Measuring is not always the best way to incentivise behaviour

# Options

- Is your measure a suitable proxy for what you're measuring?
- Quantitative measures are for quantifiable things...
  - Citations, publications, money, students
- Qualitative measures for qualifiable things...
  - Quality, diversity, excellence, value
- Beware using quantitative indicators as a proxy for qualitative things
  - Citations  $\neq$  quality
  - Ranking position  $\neq$  excellence

# Probe for potential negative impacts

1. Who does this discriminate against?
2. How could this be gamed?
3. What might the perverse incentives and consequences be?
4. Do the benefits of measuring outweigh the cost of measuring?
5. Is evaluating research actually going to make it any better?

# You don't fatten a pig by weighing it

# Snowball Metrics

## 5.19 Sustainable Spin-Offs

NUMBER OF SUSTAINABLE SPIN-OFFS

ENDORSED BY: UNITED KINGDOM.

### 5.19.1 Metric definition

This metric calculates the number of sustainable spin-offs.

It answers the question of how many companies that are high quality, and therefore sustainable, an institution has delivered.

### 5.19.2 Details

A spin-off is a company that has been set up to exploit intellectual property that originated from within the institution.

The types of spin-off counted in this recipe are those for which the definition is specific and not open to interpretation, and where the institutional data quality upon which the metric is based are relatively high. These are:

- A spin-off with some institutional ownership.

A spin-off based on institutional intellectual property that is not owned by the institution.

### 5.19.3 Primary data sources

- Institutional intellectual property database or Current Research Information System (CRIS system)
- Published annual accounts
- National statutory reports, such as those available from the Higher Education Statistics Agency<sup>172</sup> (HESA) in the UK

# Snowball Metrics

## 5.20.3 Primary data sources

- Institutional accounts system or Current Research Information System (CRIS system)
- Published annual accounts
- National statutory reports, such as those available from the Higher Education Statistics Agency (HESA) in the UK

## 5.20 Spin-Off-Related Finances ✨

FINANCIAL BENEFITS DERIVED FROM ACTIVE SPIN-OFFS

ENDORSED BY: UNITED KINGDOM.

### 5.20.1 Metric definition

This metric calculates the financial benefits derived from an institution's active spin-offs.

It answers the questions of:

- How many jobs an institution is creating from its spin-offs.
- What economic return an institution delivers to its region and / or nation.
- How an institution is helping its companies to grow.
- The quality of an institution's spin-out companies.

(a) Number of FTEs employed by active spin-offs

(b) Turnover from active spin-offs

(c) External investment in active spin-offs

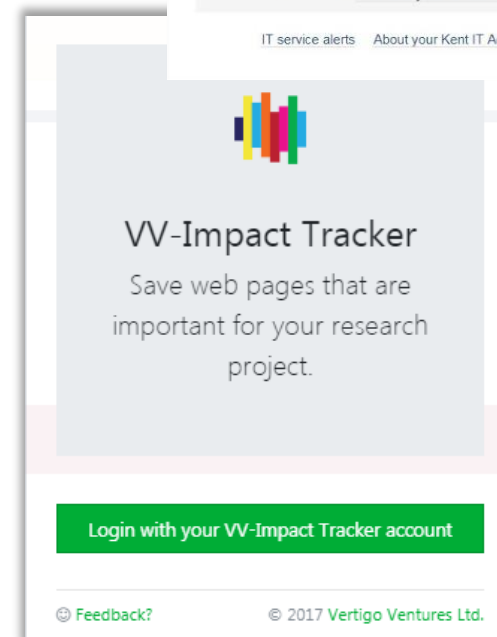

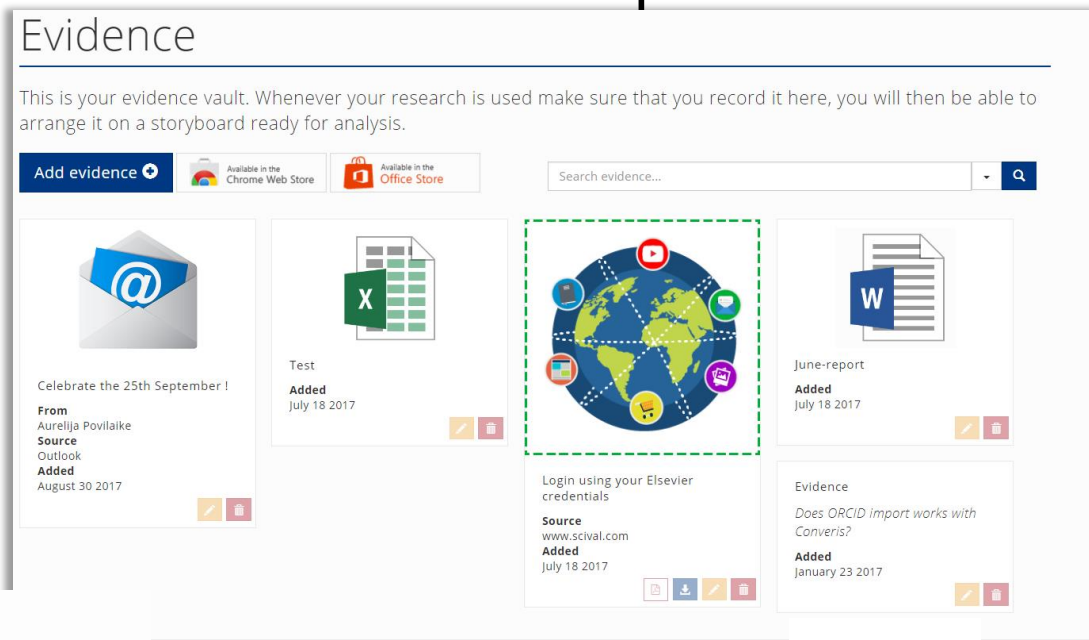

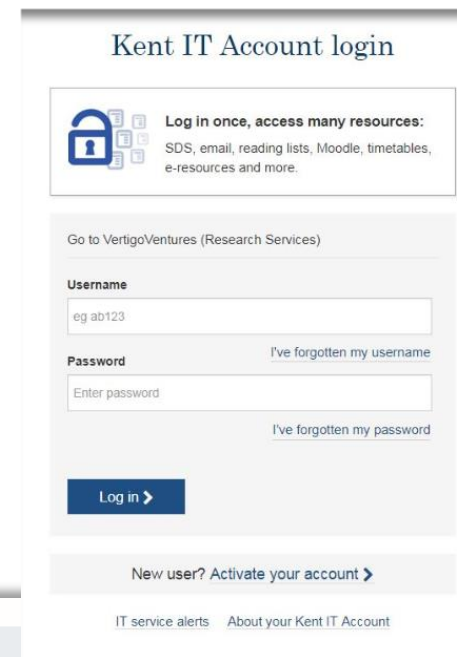

# Vertigo Ventures

- There are other systems, eg:
  - Kudos: <https://www.growkudos.com/>
  - Evernote: <https://www.fasttrackimpact.com/evernote>  
– (Fast Track Impact)
  - ImpactStory: <https://our-research.org/>
  - DCC: <http://www.dcc.ac.uk/resources/how-guides/track-data-impact-metrics>
- Thanks to Renata McDonnell for these slides

# VV-Tracker

- Single Sign On
- Intuitive
- Fast tracking impact
- Learning tool
- Fulfil evidence requirement

# Recent Feedback

- *“I’ve been using VV impact tracker to help me prepare a pilot case study for the REF pilot. I find it very intuitive. I am particularly keen on the feature that allows you to add VV to the Google Chrome toolbar for easy downloads/clipping to the VV Venture’s evidence vault.”*
- *“Over all I think the system has a lot of potential. I’ve done a lot of impact recording and tracking for my work in the past (we were a case study in 2014) **and this software will definitely make it easier.**”*

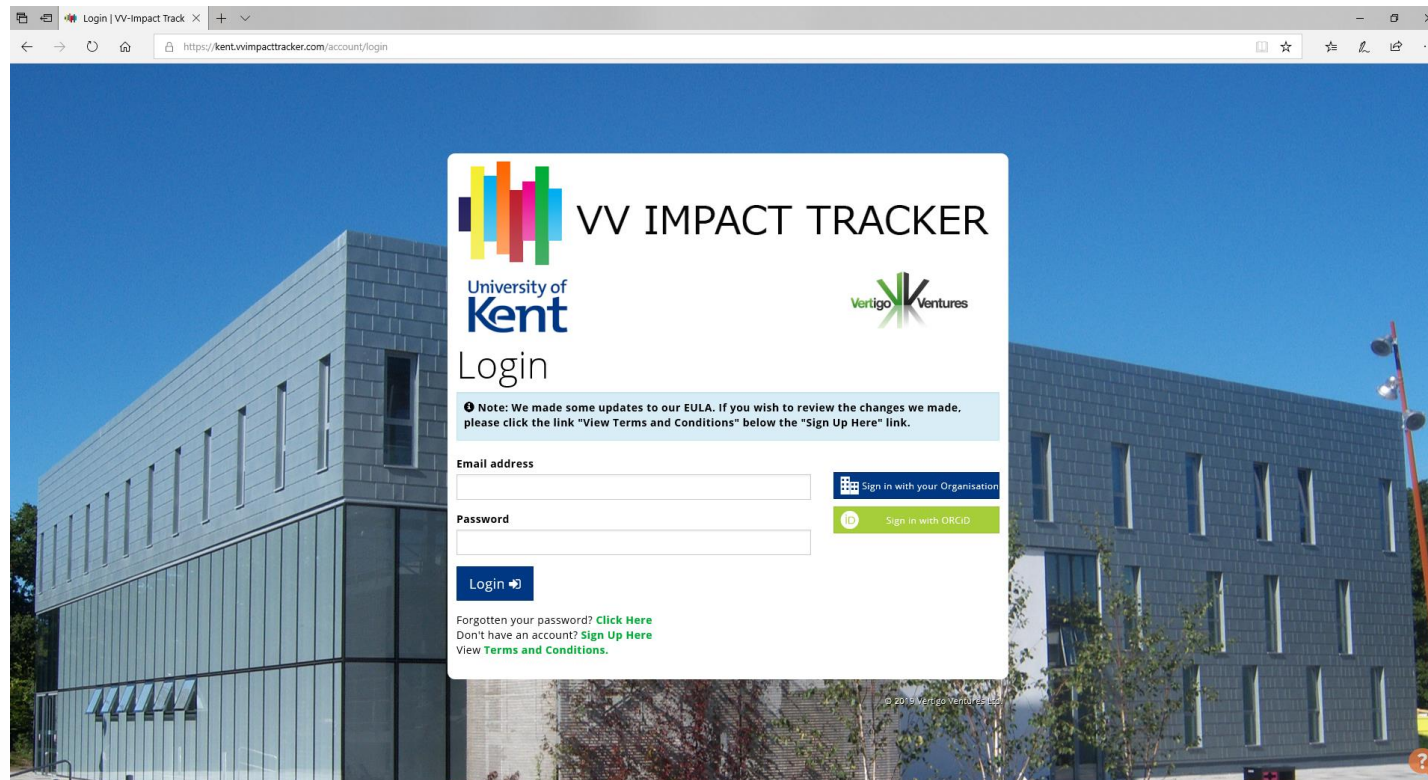

# How we support / engage with staff

- Web resources
- Proactive and Responsive support
- Scheduled and bespoke training
- Engagement and support
  - VV, IS department
- Events to promote Impact
  - *i.e. Maximise Your Research Impact 2017 →*

# Challenges

- New system
- Additional support in certain areas
- Providing training at the right time

# Types of Evidence

**Main Panel A:** Biological Sciences and Medicine  
**Main Panel B:** Physical Sciences and Engineering

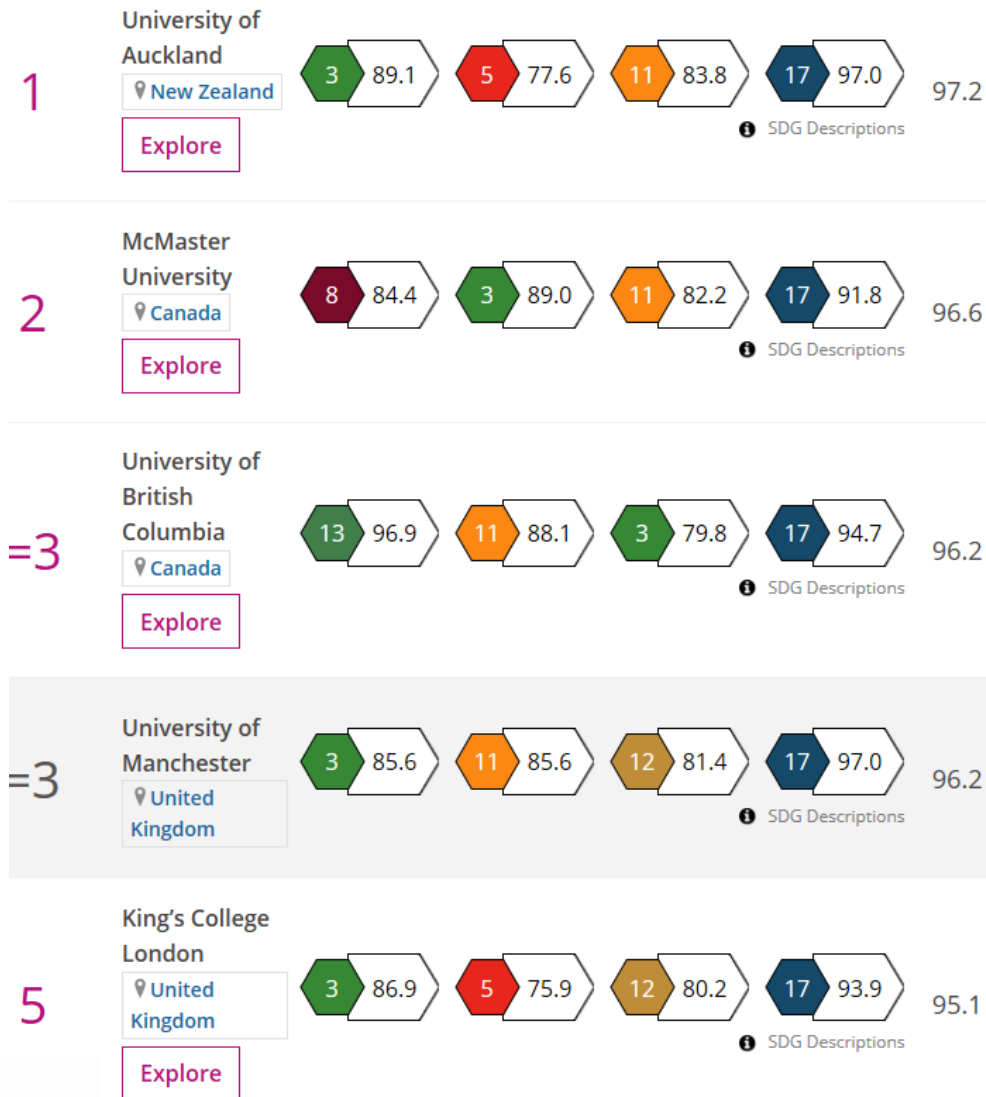

**Main Panel C:** Social Sciences  
**Main Panel D:** Arts and Humanities

[http://www.vertigoventures.com/wp-content/uploads/2018/11/HEFCE-2016\\_05\\_CollectingResearchImpactEvidenceReport.pdf](http://www.vertigoventures.com/wp-content/uploads/2018/11/HEFCE-2016_05_CollectingResearchImpactEvidenceReport.pdf)

# Vertigo Ventures

- UN SDGs
  - The eleven optional SDGs that universities can report on are:
    - SDG #3: Good Health and Well-Being
    - SDG #4: Quality Education
    - SDG #5: Gender Equality
    - SDG #8: Decent Work and Economic Growth
    - SDG #9: Industry, Innovation and Infrastructure
    - SDG #10: Reduced Inequalities
    - SDG #11: Sustainable Cities and Communities
    - SDG #12: Responsible Consumption and Production
    - SDG #13: Climate Action
    - SDG #16: Peace, Justice and Strong Institutions
    - SDG #17: Partnerships for the goals

# Vertigo Ventures (THE)

## How is the ranking created?

A university's final score in the overall table is calculated by combining its score in SDG 17 with its top three scores out of the remaining 10 SDGs. SDG 17 accounts for 22 per cent of the overall score, while the other SDGs each carry a weighting of 26 per cent. This means that different universities are scored based on a different set of SDGs, depending on their focus.

The score from each SDG is scaled so that the highest score in each SDG in the overall calculation is 100. This is to adjust for minor differences in the scoring range in each SDG and to ensure that universities are treated equitably whichever SDGs they have provided data for.

# Summary

- Why do you want to measure / assess impact?
- What data do you have / can you get?
- What is missing?
  
- Responsible Impact Culture...?
- How will you approach it?
- How will you embed it?
- How will you uphold it?

of the Policy and Representation Committee of  
EARMA

# **Methods & Instruments for Assessing the Societal Impact of Research**

Defining and assessing your institute's strength

**Working with impact  
A research management perspective**

**London, Wednesday, 06 November 2019**

Bettina Uhrig, [bettina.uhrig@oslomet.no](mailto:bettina.uhrig@oslomet.no)

Senior Adviser Internationalisation and DARE Impact Manager  
Oslo Metropolitan University (OsloMet) – Norwegian Social Research  
(NOVA)

## Working with impact - A research management perspective

### Definition of impact

‘Impact broadly defines the wider societal, economic or environmental cumulative changes over a longer period of time.’

(European Commission, *Horizon 2020 indicators – Assessing the results and impact of Horizon 2020*, Brussels 2015, page 6)

‘**Scientific consequences** (impact) are, for example, the advancement of knowledge and how the research landscape is influenced....

**Societal consequences** include addressing questions, such as what does society gain in the form of better products, better services, healthier lives, better welfare, a sustainable development, etc.’

(European Science Foundation, *The challenges of Impact Assessment*, Strasbourg 2012, page 5)

**Working with impact - A research management perspective**

**Creating impact activities – before assessing impact**

Defining outputs, outcomes and impact in H2020

**Impact:**

Societal, including political, impact

Academic/scientific impact

Economic impact

Net4Society, *Increasing Impact!*,

[https://www.net4society.eu/files/Net4Society4\\_D3\\_1\\_1\\_Factsheet\\_Impact\\_final.pdf](https://www.net4society.eu/files/Net4Society4_D3_1_1_Factsheet_Impact_final.pdf)

## **Working with impact - A research management perspective**

### **Why impact management at project level?**

Projects funded by EU Research and Innovation Programmes should increasingly involve citizens and should **create societal, including political, impact.**

**‘Mobilise and involve citizens’** is one of the recommendations in the Lamy report and should be achieved by stimulating ‘co-design and co-creation through citizen involvement’.

European Commission, DG RTD, *LAB – FAB – APP – Investing in the Future we want*, Luxembourg 2017, page 6.

## **Working with impact - A research management perspective**

### **Mobilising and involving citizens**

Good practice examples from many programmes and projects are available, e.g. from

- the Targeted Socio-Economic Research (TSER) Programme in FP4
- the FP projects IMPACT-EV (FP7), DANDELION (H2020) and ACCOMPLISSH (H2020)
- national funding agencies, e.g. the Research Excellence Framework (REF) in UK and the evaluation of the social sciences (SAMEVAL) in Norway

## **Working with impact - A research management perspective**

### **Tools for involving citizens and creating impact**

#### **1) Civil Society Organisations (CSOs) as consortium members in H2020 proposals and projects**

They should be

- engaged in the proposal process,
- partly involved in the research studies,
- involved in drafting and monitoring the Plan for Dissemination and Exploitation of the project's Results (PDER),
- paid for their involvement (person months, other and indirect costs).

## **Working with impact - A research management perspective**

### **Tools for involving citizens and creating impact**

#### **2) National Stakeholder Groups (NSGs)**

- Members can come from public (incl. schools), private (incl. media) or social partner organisations, industry and CSOs.
- Their tasks can differ, according to the needs of the project and the consortium members, the national/regional/local context and the expected impacts.

## **Working with impact - A research management perspective**

### **Tools for involving citizens and creating impact**

#### **Collaboration with CSOs and NSGs**

*Challenges: various demands and tasks at the work places (e.g. research – teaching – advocacy); different languages and cultures*

*Action: dedicated impact management, e.g. through the involvement of an impact manager and an impact sub-committee*

**Working with impact - A research management perspective**

## **Case study H2020 project DARE**

**DARE – Dialogue About Radicalisation and Equality**

Research and Innovation Action, Societal Challenge 6, Work Programme 2016

17 consortium members from 13 different countries

11 Work Packages, Duration: May 2017 – April 2021

Coordinator: Hilary Pilkington, University of Manchester, UK

DARE has received funding from the European Union's Horizon 2020 research and innovation programme under grant agreement No 725349.

## **Working with impact - A research management perspective**

### **Case study H2020 project DARE**

DARE **aims** to broaden understanding of radicalisation, demonstrates that it is not located in any one religion or community and explores the effects of radicalisation on society.

DARE **focuses** on environments in which radicalisation messages are found, rather than terrorist events or individuals.

For further information, please visit the DARE website and watch the video:

<http://www.dare-h2020.org/>

## **Working with impact - A research management perspective**

### **Case study H2020 project DARE**

DARE has a strong focus on involving citizens to create and disseminate new knowledge. These are some of the tools for achieving societal impact:

1) The consortium comprises two CSOs: **the European Network Against Racism (ENAR) and the People for Change Foundation (PfC)**. Both are responsible for exploitation and dissemination actions, e.g. the DARE website, dialogue workshops and policy forums. They are also involved in some of the research studies and they are members in the **DARE Impact Sub-Committee (ISC)**.

## **Working with impact - A research management perspective**

### **Case study H2020 project DARE**

2) DARE has established **National Stakeholder Groups (NSGs)** in nearly all participating countries. Most NSGs have between six and 12 members and meet app. two times each year.

*Challenge: to create understanding and acceptance for the relevance and benefit of having a NSG.*

*Advantage: support and monitoring by the **ISC and the Impact Manager.***

*Actions: impact workshop during a consortium meeting and regular communication; minutes from NSG meetings and internal impact reports.*

## **Working with impact - A research management perspective**

### **Case study H2020 project DARE**

3) Based on the DARE findings, the ISC supports the early development and dissemination of **Policy Briefs**, and their translation into national languages.

*Challenge: writing a Policy Brief which is interesting and easy to understand by different stakeholders and in different languages.*

*Action: the ISC has developed a guideline relevant and acceptable for DARE and the Research Executive Agency.*

## **Working with impact - A research management perspective**

### **Conclusions**

- 1) **Stakeholder involvement in research proposals and projects** is one tool for mobilising and involving citizens.
- 2) Stakeholder involvement can be strengthened through different actions, e.g. by **involving CSOs in the project team** and by **establishing NSGs**.
- 3) **Dedicated impact management** at different levels (project, programme, department, organisation) could enhance and ease the involvement of stakeholders.

## **Working with impact - A research management perspective**

### **Recommendations**

- 4) Acknowledgment of the **involvement of stakeholders as indicator for the Societal Readiness Level (SRL)** of a proposal and project.
- 5) **Funding** for communication, dissemination and impact management **after the end of a project** to encourage, monitor and secure possible societal impacts.
- 6) Enhance the involvement of citizens in the development of work programmes and missions in Horizon Europe, e.g. through **dialogue workshops or future search conferences at national and regional levels.**

## Working with impact - A research management perspective

### Reminder

‘There is a need for **greater outreach** to civil society to better explain results and impacts and the contribution that research and innovation can make to tackling societal challenges, and to **involve them better** in the programme co-design (agenda setting) and its implementation (co-creation).’

European Commission, DG RTD, *Key findings from the HORIZON 2020 interim evaluation*, Luxembourg 2017, page 21.

### Issue to discuss

How can we link this need to the Agenda 2030 and its Sustainable Development Goals (SDGs) – in research strategies, research proposals and projects?

## **Working with impact - A research management perspective**

### **Outlook**

#### **What does EARMA do?**

##### One example

The Policy & Representation Committee (P&RC) has developed a questionnaire asking all institutional members to reflect on their impact strategies and impact actions.

Period of survey: November 2019

The results will be presented at the next EARMA Annual Conference, 27 – 29 April 2020 in Oslo.

# REF overview

## How it works

REF assesses the quality of research in all UK universities, in all disciplines. It is carried out by 36 expert panels, grouped into 4 main panels.

Main Panel A: **Medical and life sciences**

Main Panel B: **Physical sciences and engineering**

Main panel C: **Social sciences**

Main Panel D: **Arts and humanities**

**2011-12**

### Preparation

Panels were appointed. Guidance and criteria were published.

**2012-13**

### Submissions

Universities made submissions in whichever subjects they chose to.

**2014**

### Assessment

36 expert panels reviewed the submissions, guided by the 4 main panels.

# REF overview

## What was assessed

Panels judged the **overall quality** of each submission

65%

Quality of research  
**outputs**

**191,150** research  
outputs by **52,061**  
staff were reviewed

20%

**Impact** of research  
on society

**6,975** impact case  
studies were  
reviewed

15%

The research  
**environment**

The review was  
based on data and  
information about  
the environment

# Impact and academic quality go hand-in-hand

# REF overview

## What was assessed

Panels judged the **overall quality** of each submission

65%

Quality of research  
**outputs**

191,150 research  
outputs by 52,061  
staff were reviewed

20%

**Impact** of research  
on society

6,975 impact case  
studies were  
reviewed

15%

The research  
**environment**

The review was  
based on data and  
information about  
the environment

# REF overview

“an effect on, change or benefit to the economy, society, culture, public policy or services, health, the environment or quality of life, beyond academia”

- 4-page narrative
- ‘underpinning research’
- evidence and corroboration
- assessment by academics and research users

# Strengths and weaknesses of case studies

- Strengths
  - Applicable to all disciplines/all type of impact
  - Basis for robust quality evaluation
  - Rich source of insight about impact processes

# Strengths and weaknesses of case studies

- Strengths
  - Applicable to all disciplines/all type of impact
  - Basis for robust quality evaluation
  - Rich source of insight about impact processes
- Weaknesses
  - Difficult to combine
  - Time-consuming to produce (and so expensive)
  - Not necessarily representative

# Questions and discussion – part 1

# Quantitative indicators in the REF impact case studies

**The quantitative evidence supporting claims for impact was diverse and inconsistent, suggesting that the development of robust impact metrics is unlikely**

There was a large amount of numerical data (ie, c170,000 items, or c70,000 with dates removed) that was inconsistent in its use and expression and could not be synthesized. [...] Given this, and based on our analysis of the impact case studies, we would reiterate the conclusion [...]: 'impact indicators are not sufficiently developed and tested to be used to make funding decisions' (Grant et al, 2010).

# Example indicator: Quality-adjusted life years (QALY)

- Measure of health impact; can be monetized
- Used in 25 case studies
- Estimate a total net gain of around £2 billion for these case studies
- Challenges with using QALY:
  - Inconsistent use (individual vs population)
  - Varying monetization rate (£25k-£40k per QALY)
  - Further information or evidence required

# Standardising impact indicators

## Guidance for standardising the use of quantitative indicators of impact within REF case studies

### Style guide

This consists of general stylistic items that can be standardised to make quantitative indicators of impact, and specific formulations of them, more discoverable in the case studies. The style guide would apply across all of the specific guidance.

Numbers

Percentages and rates

Measures of change

Time periods

Units

Currency

### Specific guidance

This covers more specific and commonly occurring quantitative indicators that have been used as evidence of impact in the case studies. Standardisation could improve discoverability of quantitative indicators of impact and their potential aggregation.

### Abstract

How does scientific research affect the world around us? Being able to answer this question is of great importance in order to appropriately channel efforts and resources in science. The impact by scientists in academia is currently measured by citation based metrics such as h-index, i-index and citation counts. These academic metrics aim to represent the dissemination of knowledge among scientists rather than the impact of the research on the wider world. In this work we are interested in measuring scientific impact beyond academia, on the economy, society, health and legislation (comprehensive impact). Indeed scientists are asked to demonstrate evidence of such comprehensive impact by authoring case studies in the context of the Research Excellence Framework (REF). We first investigate the extent to which existing citation based metrics can be indicative of comprehensive impact. We have collected all recent REF impact case studies from 2014 and we have linked these to papers in citation networks that we constructed and derived from CiteSeerX, arXiv and PubMed Central using a number of text processing and information retrieval techniques. We have demonstrated that existing citation-based metrics for impact measurement do not correlate well with REF impact results. We also consider metrics of online attention surrounding scientific works, such as those provided by the Altmetric API. We argue that in order to be able to evaluate wider non-academic impact we need to mine information from a much wider set of resources, including social media posts, press releases, news articles and political debates stemming from academic work. We also provide our data as a free and reusable collection for further analysis, including the PubMed citation network and the correspondence between REF case studies, grant applications and the academic literature.

### Introduction

Research councils and investors now expect research scientists to plan for and demonstrate the impact of their work. Attempting to understand and maximise the impact of research should be beneficial to scientists, not only as a requirement of funding, but also because it would help

## Altmetric Scores: An Early Indicator of Research Impact

**In this article we test whether metrics of online attention describing research can provide information on research quality and societal impact that is not found in citation data alone. Our approach is to set up a traditional model in which the true quality or impact of a university department is determined by a panel of experts, but a citation metric is regarded as a reasonable proxy. However, the model assumes that the information contained in the scores provided by an expert panel exceeds that contained in a citation metric (HEFCE, 2015). Finally, we extend this model by including altmetric data to see if it adds information about a department's performance that cannot be gleaned from citations alone. We find the presence of altmetric data for the cited underpinning research to be highly correlated with peer review scores for societal impact. Conversely, no such connection was seen with the assessment of research quality. Our findings therefore suggest altmetric data could be useful as an aid to assessing impact.**

### Introduction

Within a research evaluation environment, in which there is continuous pressure on both researchers and funders to provide evidence of impact (Penfield, Baker, Scoble, & Wykes, 2013), new assessment platforms are increasingly being used to monitor research activity. Alternative metrics, often known as "altmetrics," use web scraping tools and APIs to track online media attention across a range of social, traditional media, and governmental sources. Altmetrics are relatively immature compared with traditional bibliometric indicators; however, they are starting to provide new insights into the ways people consume, share, and report research (Barnes, 2015).

Previous studies looked at the volume and frequency of data collected for the subindicators that comprise a typical altmetric. Moreover, a number of studies assess how altmetrics

compare with bibliometric measures of research uptake, and demonstrate that some altmetrics are weakly correlated with traditional citation metrics (Costas, Zahedi, & Wouters, 2014; Fenner, 2014; Galligan & Dyas-Correa, 2013; Sud & Thelwall, 2014; Thelwall, Haustein, Larivière, & Sugimoto, 2013; Wildson et al., 2015). However, although there is a general understanding that information gleaned from altmetrics is complementary—but not identical—to that provided by traditional citation data, there is currently a lack of empirical evidence to support the notion that altmetrics contain extra information about the economic or social impact of a piece of research (Barnes, 2015; Bornmann, 2013; Costas et al., 2014).

In this study we use research cited in the UK's REF 2014 exercise (Ref.ac.uk, 2016) to assess how much information altmetric attention scores can provide toward the assessment of research quality and impact. To do so, we use data obtained from Clarivate's Web of Science (WoS), as well as online media counts from Altmetric.com. Altmetric.com started tracking online mentions of research activity from the latter half of 2011. The range and scope of online attention, in terms of the number of data sources tracked and the types of digital objects recorded, is continuously being improved, resulting in an ever-growing and evolving set of data (Altmetric, 2018).

### Data Sources

The analysis was restricted to main panel B of the submissions, which relates to mathematics, engineering, and the physical sciences (see Table 1). Within this subject grouping, 48,815 of the submitted 49,317 research outputs were journal articles, allowing a near complete mapping of bibliometric indicators to REF scores. The research activity in this panel is subdivided into nine separate topics; however, for the purpose of this work, three of the engineering units of assessments (UOAs) were combined, as they could all be labeled as "applied engineering." The creation of this agglomerated group meant that the number of submitted outputs across the subject areas were somewhat equalized

### ABSTRACT

Altmetrics have been proposed as a way to assess the societal impact of research. Although altmetrics are already in use as impact or attention metrics in different contexts, it is still not clear whether they really capture or reflect societal impact. This study is based on altmetrics, citation counts, research output and case study data from the UK Research Excellence Framework (REF), and peers' REF assessments of research output and societal impact. We investigated the convergent validity of altmetrics by using two REF datasets: publications submitted as research output (PRO) to the REF and publications referenced in case studies (PCS). Case studies, which are intended to demonstrate societal impact, should cite the most relevant research papers. We used the MIIq indicator for assessing impact—an indicator which has been introduced for count data with many zeros. The results of the first part of the analysis show that news media as well as mentions on Facebook, in blogs, in Wikipedia, and in policy-related documents have higher MIIq values for PCS than for PRO. Thus, the altmetric indicators seem to have convergent validity for these data. In the second part of the analysis, altmetrics have been correlated with REF reviewers' average scores on PCS. The negative or close to zero correlations question the convergent validity of altmetrics in that context. We suggest that they may capture a different aspect of societal impact (which can be called unknown attention) to that seen by reviewers (who are interested in the causal link between research and action in society).
