NETWORK FOR  
ADVANCING & EVALUATING THE SOCIETAL IMPACT OF SCIENCE

UNIVERSITY OF  
COPENHAGEN

## How to increase societal impact through collaboration of SSH with non-SSH disciplines?

Maral Mahdad

Department of Food and Resource Economics, Faculty of Science,  
University of Copenhagen. [mahdad@ifro.ku.dk](mailto:mahdad@ifro.ku.dk)

## Why in 2018 we are still discussing about interdisciplinary research?

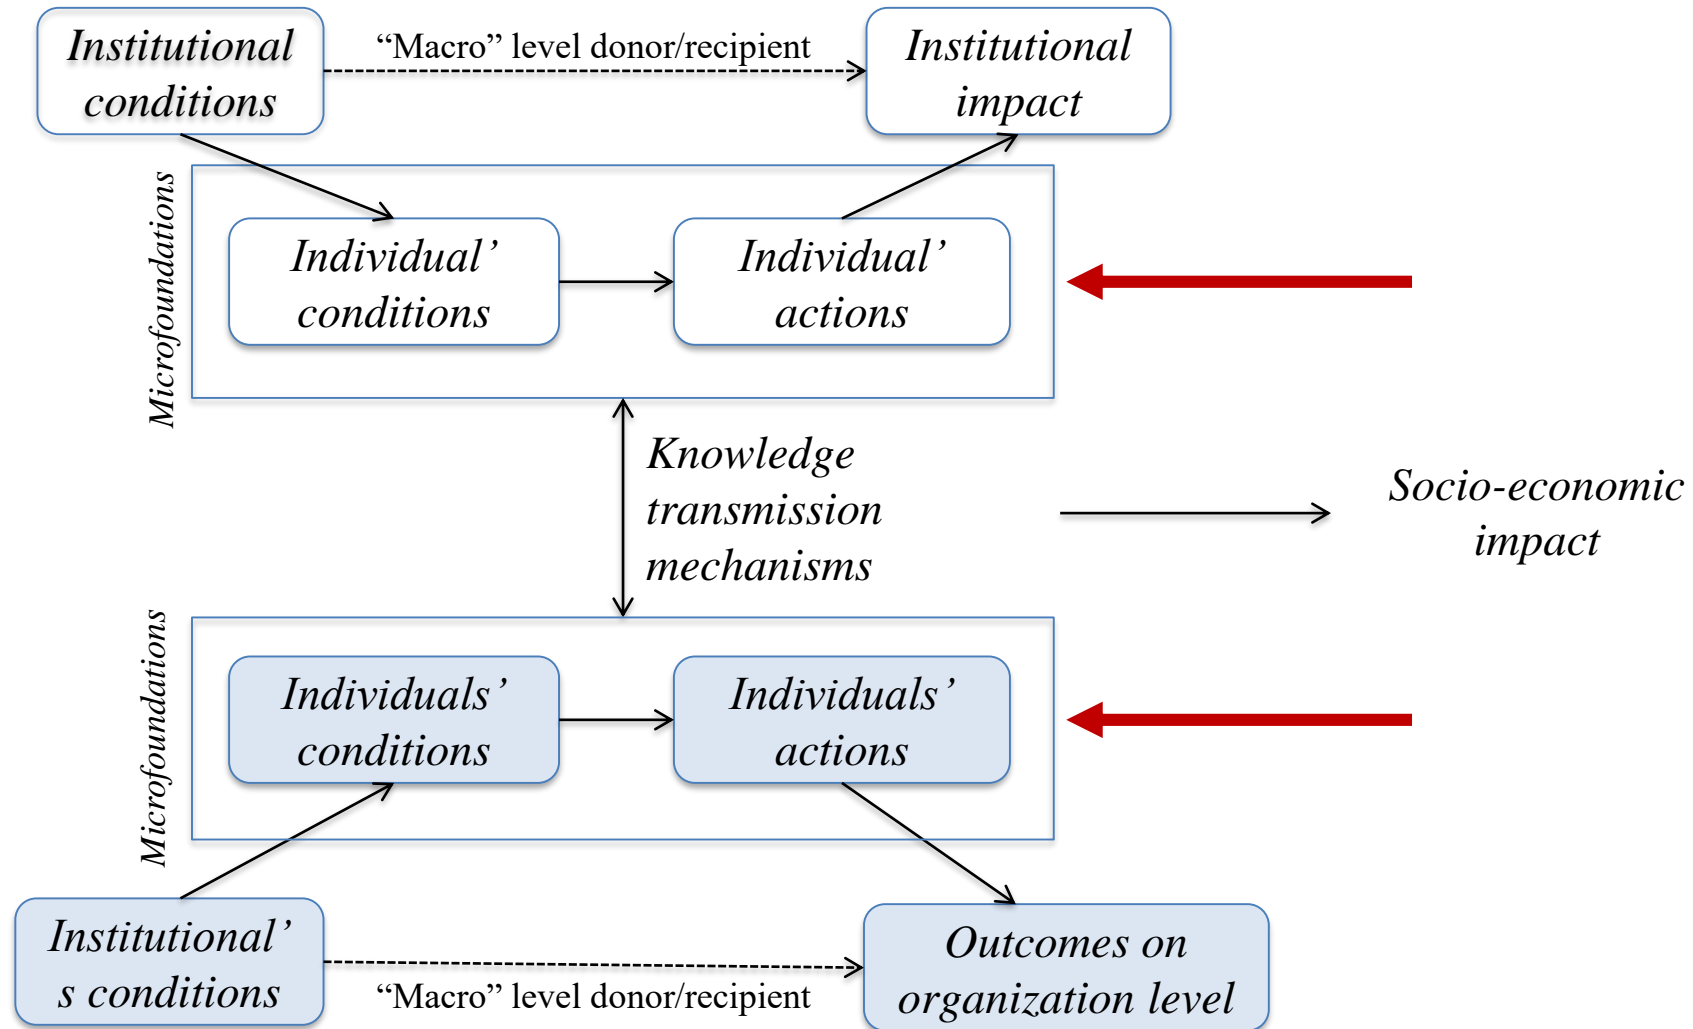

- Interdisciplinary research projects consistently experience lower success rates on applications for funding than monodisciplinary research projects (Bromham et al. 2016).
- Even though, researchers engaged in higher degrees of interdisciplinary work tend to be more cited but they are less productive (Leahey et al. 2016).
- And publications resulting from interdisciplinary research take longer than other type of scientific publications (Wang et al. 2016).

And why it must become meaningful and What are the keys to meaningful interdisciplinary research? (Think Tank DEA report, 2017)

- *“Match the challenge with the team, and the team with the challenge*
- *Focus on establishing temporary teams*
- *Find the “right” level of interdisciplinary for a given collaboration.*
- *Build engagement with users and other stakeholders into the collaboration from the beginning”*

# Research perspective

# When TIM started to practice collaborative research

- 8 collaborative laboratories
- 20-25 staff (Engineering, medical and health science, and social science)

Semantic-big data	Health technology	Smart solutions	Robotic apps	IoT	Augmented reality, visual research	Mobile services social scene	Wireless apps
-------------------	-------------------	-----------------	--------------	-----	------------------------------------	------------------------------	---------------

Interviews  
3-4 days observation based data collection

Theory:

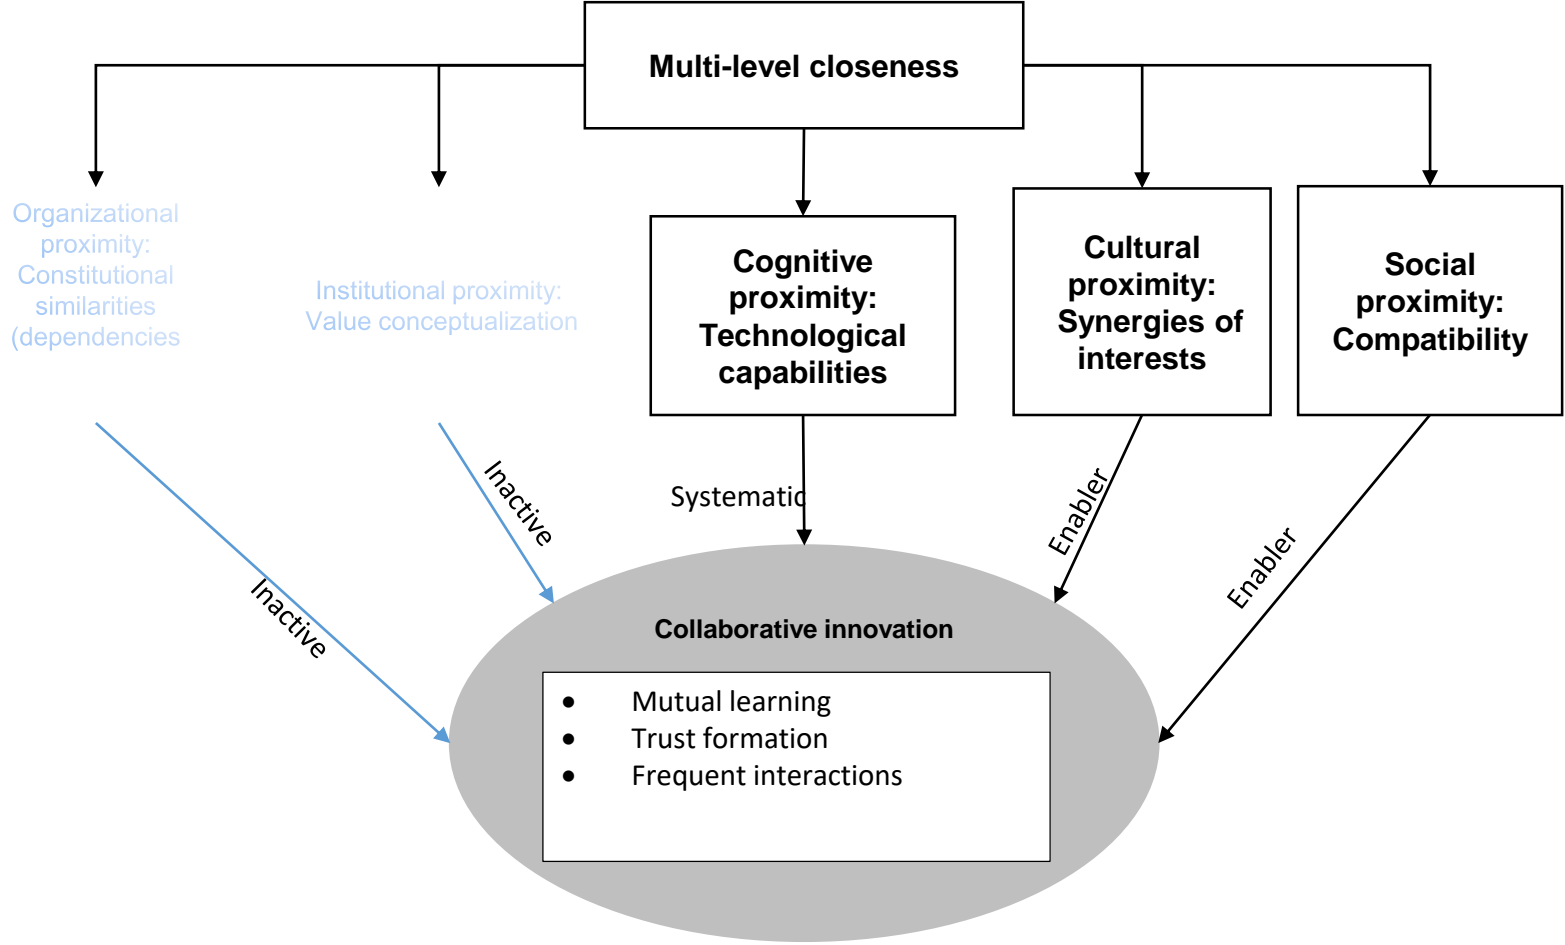

Practice:

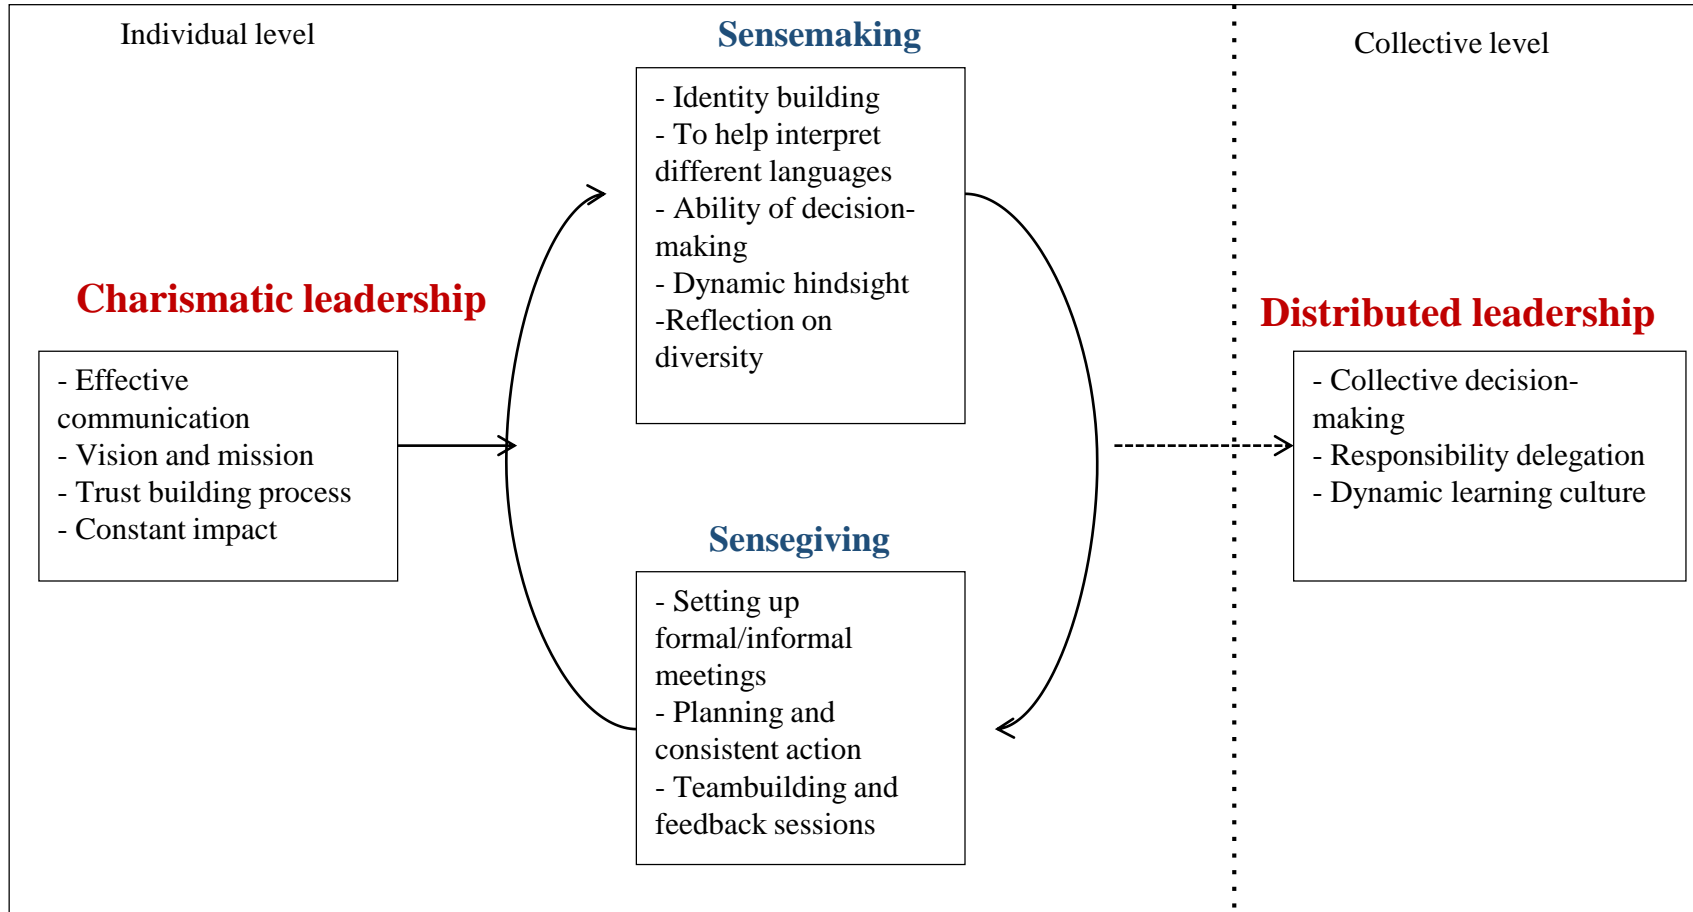

If distance plays a role? **Proximity**

If leadership of these teams are different from leadership of mono-disciplinary teams? **Leadership**

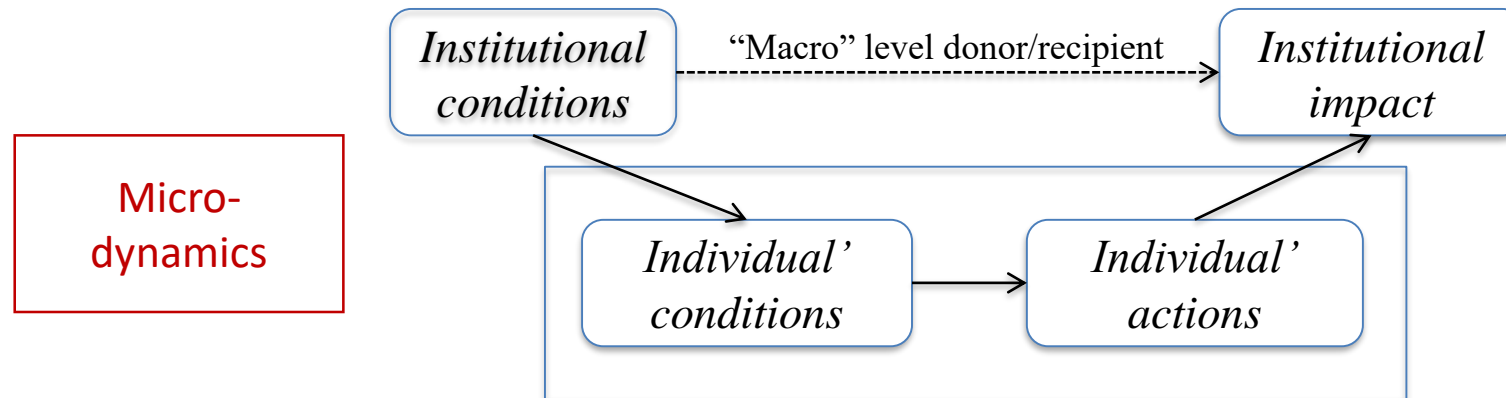

# Contributions of the study to non-SSH teams (interdisciplinary teams as a context)

Organizational readiness matters! (organizational capabilities and NIH)

The importance of behavioral aspects of individuals and emphasize on human recourse!

# Current research streams

## INTERACT:

INvesTigating thE micRofoundAtions of socioeconomic impaCt of universiT-y-industry relations

What are the he microfoundations that underlie the transmission of knowledge from university to industry and that will ultimately lead to socioeconomic impact?

Maral Mahdad, **Marcel Bogers**, Karin Beukel, Elena Tavella, Maria Theresa Norn, Toke Reinholt Fosgaard, Gergana Romanova, Sunny Mosangzi Xu

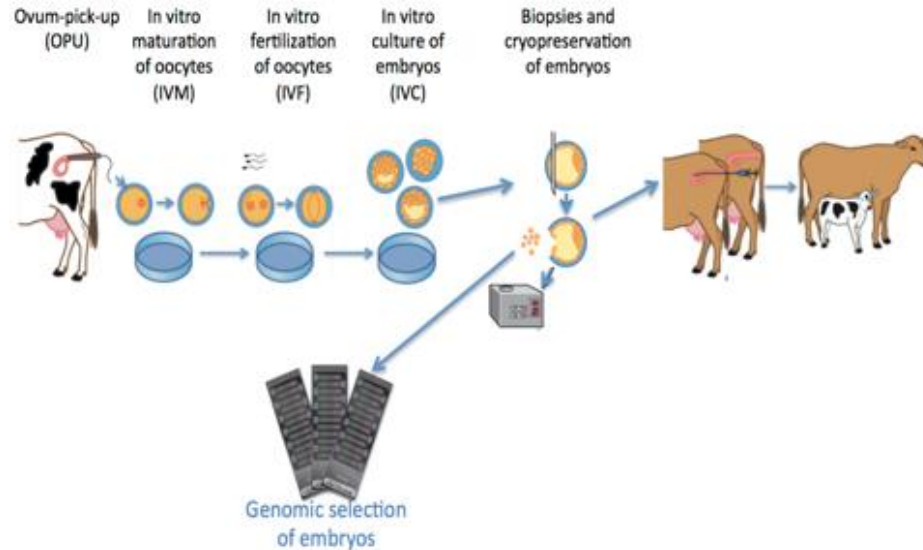

## MOIS:

Micro-foundations of interdisciplinary research collaboration

How do individual-level factors influence process and outcome of open and interdisciplinary scientific collaborations?

Susanne Beck, **Marion Poetz**, Agnes Effert, Maral Mahdad, Alexander Ruser, Maria Theresa Norn

## Example 1: EliteOva research team

Now it is possible to select the best calves long before they are born. It serves to put turbo on the Danish breeding of dairy cows, improving the competitiveness of Danish dairy producers. At the same time, the project will contribute positively to preventing climate change, as it will also be possible to select for cows with a smaller methane release.

30 members  
Animal scientists, Vets,  
mathematician, and Social  
scientists

- Longitudinal data collection
- Mapping knowledge network (location of nodes, content of knowledge exchange, density of interactions, and evolution of knowledge map)
- Ethnography and meeting observations

## Example 2: The Open Door project

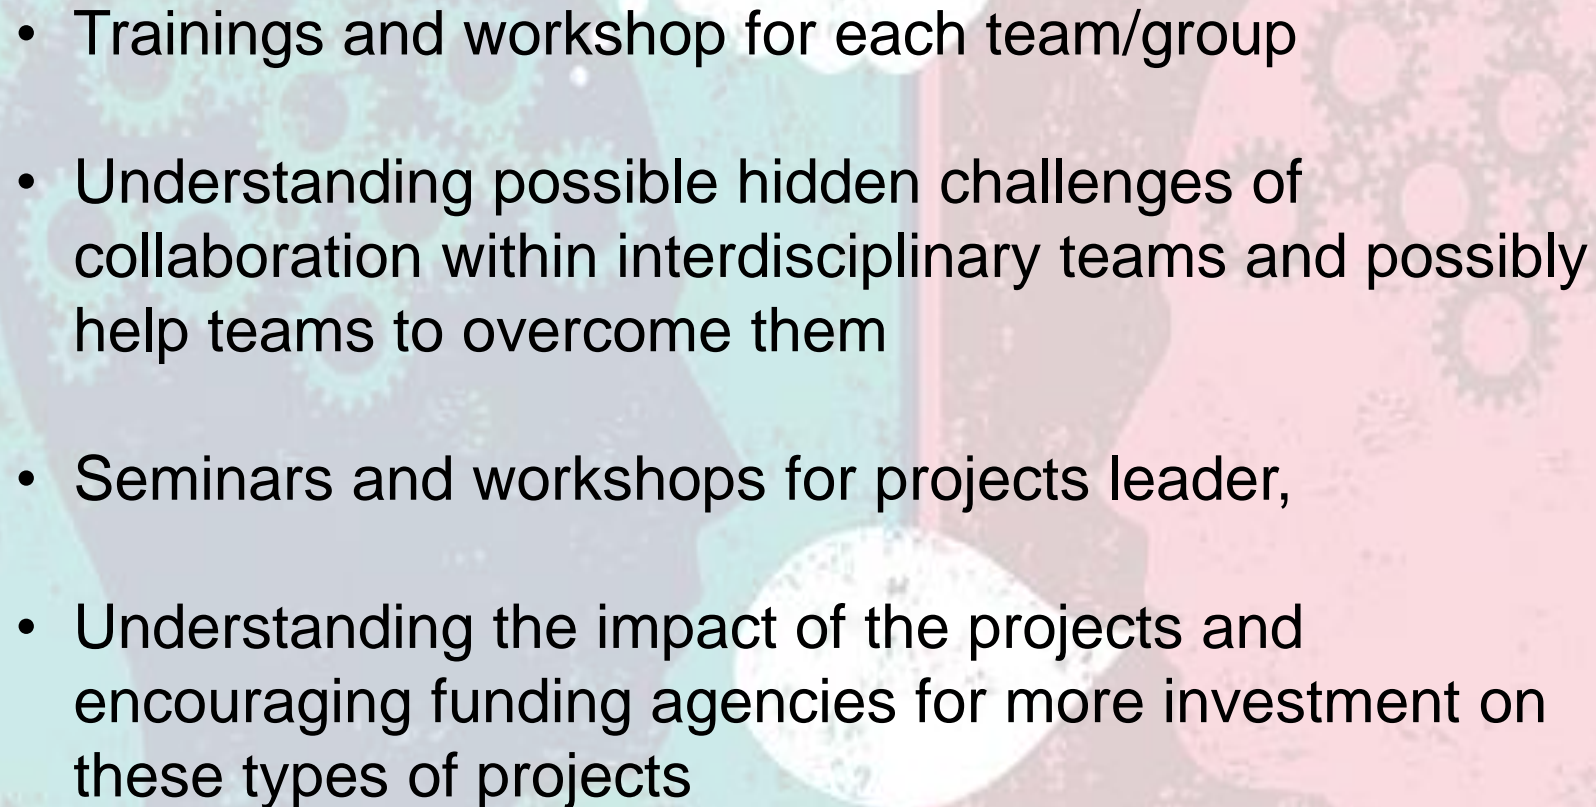

The D.O.T research group will investigate the impact of social networks on the well-being of children age 9-12. The group will focus on the *social connectedness* and its influence of coping ability in times of personal crisis over a four-year period (2018-2021).

10 members

Psychologists, psychiatrists,  
social scientists and computer  
scientists

- Longitudinal data collection
- Mapping knowledge network (location of nodes, content of knowledge exchange, density of interactions, and evolution of knowledge map)
- Experimental interventions

# Possible non-scientific contributions

- 
- Trainings and workshop for each team/group
  - Understanding possible hidden challenges of collaboration within interdisciplinary teams and possibly help teams to overcome them
  - Seminars and workshops for projects leader,
  - Understanding the impact of the projects and encouraging funding agencies for more investment on these types of projects

How to increase societal impact through collaboration of SSH with non-SSH disciplines?

- 1) Understanding the **inter-personal and team** dynamics (actions and interactions) within collaborative and interdisciplinary teams!
- 2) Implementing diverse sets of **methodologies** to assess micro-dynamics at different levels (individual, team, organization, community, and society)
- 3) More focus on the micro-level understanding of how these **interactions will lead to different socio-economic impact** (short, medium and long term)

***Thank you!***

***Feedback and questions are welcome 😊***
